

AZ-104

Administer Governance and Compliance

About this course: Course Outline

01: Administer Identity

02: Administer Governance and Compliance

03: Administer Azure Resources

04: Administer Virtual Networking

05: Administer Intersite Connectivity

06: Administer Network Traffic Management

07: Administer Azure Storage

08: Administer Azure Virtual Machines

09: Administer PaaS Compute Options

10: Administer Data Protection

11: Administer Monitoring

Administer Governance and Compliance Introduction

[Configure Subscriptions](#)

[Configure Azure Policy](#)

[Configure Role-Based Access Control](#)

[Lab 02a - Manage Subscriptions and RBAC](#)

[Lab 02b - Manage Governance via Azure Policy](#)

[Lab 03a – Manage Azure resources with the Azure portal](#)

Configure Subscriptions and Configure Azure Resource Manager Resources

Configure Subscriptions Introduction

Identify Regions

Implement Azure Subscriptions

Identify Subscription Usage

Obtain a Subscription

Create Resource Groups

Determine Service Limits and Quotas

Create an Azure Resource Hierarchy

Apply Resource Tagging

Manage Costs

Summary and Resources

Identify Regions

A region represents a collection of datacenters

Provides flexibility and scale

Preserves data residency

Select regions close to your users

Be aware of region deployment availability

There are global services that are region independent

Regions are paired for high availability

**Worldwide there are 60+ regions
representing 140 countries**

Implement Azure Subscriptions

Only identities in Azure AD, or in a directory that is trusted by Azure AD, can create a subscription

Logical unit of Azure services that is linked to an Azure account

Security and billing boundary*

Identify Subscription Usage

Subscription	Usage
Free	Includes a \$200 credit for the first 30 days, free limited access for 12 months
Pay-As-You-Go	Charges you monthly
CSP	Agreement with possible discounts through a Microsoft Cloud Solutions Provider Partner – typically for small to medium businesses
Enterprise	One agreement, with discounts for new licenses and Software Assurance – targeted at enterprise-scale organizations
Student	Includes \$100 for 12 months – must verify student access

Obtain a Subscription

Enterprise Agreement customers make an upfront monetary commitment and consume services throughout the year

Resellers provide a simple, flexible way to purchase cloud services

Partners can design and implement your Azure cloud solution

Personal free account – Start right away

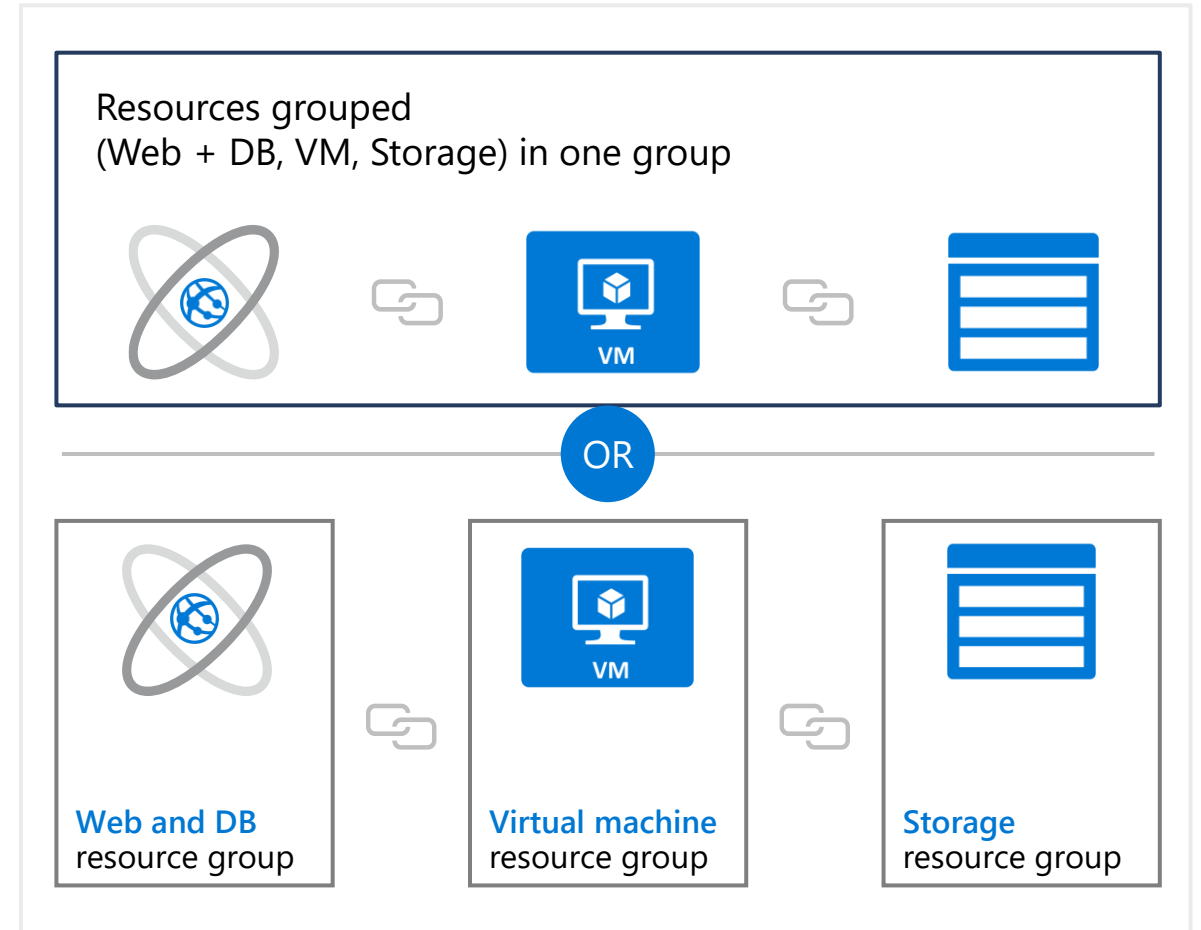

Create Resource Groups

Resources can only exist in one resource group

Groups can have resources of many different types (services) and from many different regions

Groups cannot be renamed or nested

You can move resources between groups

Determine Service Limits and Quotas

ASC DEMO | Usage + quotas

Subscription

Settings

Programmatic deployment

Resource groups

Resources

Usage + quotas

Policies

Security

Events

You can use each Microsoft Azure resource up to its quota. Each subscription has separate quotas and usage is tracked per subscription. If you reach a quota cap, you can request an increase via Help + Support. [Learn more](#)

Request Increase

Quota	Provider	Location	Usage
Total Regional vCPUs	Microsoft.Compute	East US	<div><div></div></div> 25 % 25 of 100
Total Regional vCPUs	Microsoft.Compute	West Europe	<div><div></div></div> 21 % 21 of 100
Total Regional vCPUs	Microsoft.Compute	Central US	<div><div></div></div> 17 % 17 of 100
Standard Dv2 Family vCPUs	Microsoft.Compute	West Europe	<div><div></div></div> 16 % 16 of 100
Standard Dsv2 Family vCPUs	Microsoft.Compute	Central US	<div><div></div></div> 14 % 14 of 100

Resources have a default limit
- a subscription quota

Helpful to track current usage,
and plan for future use

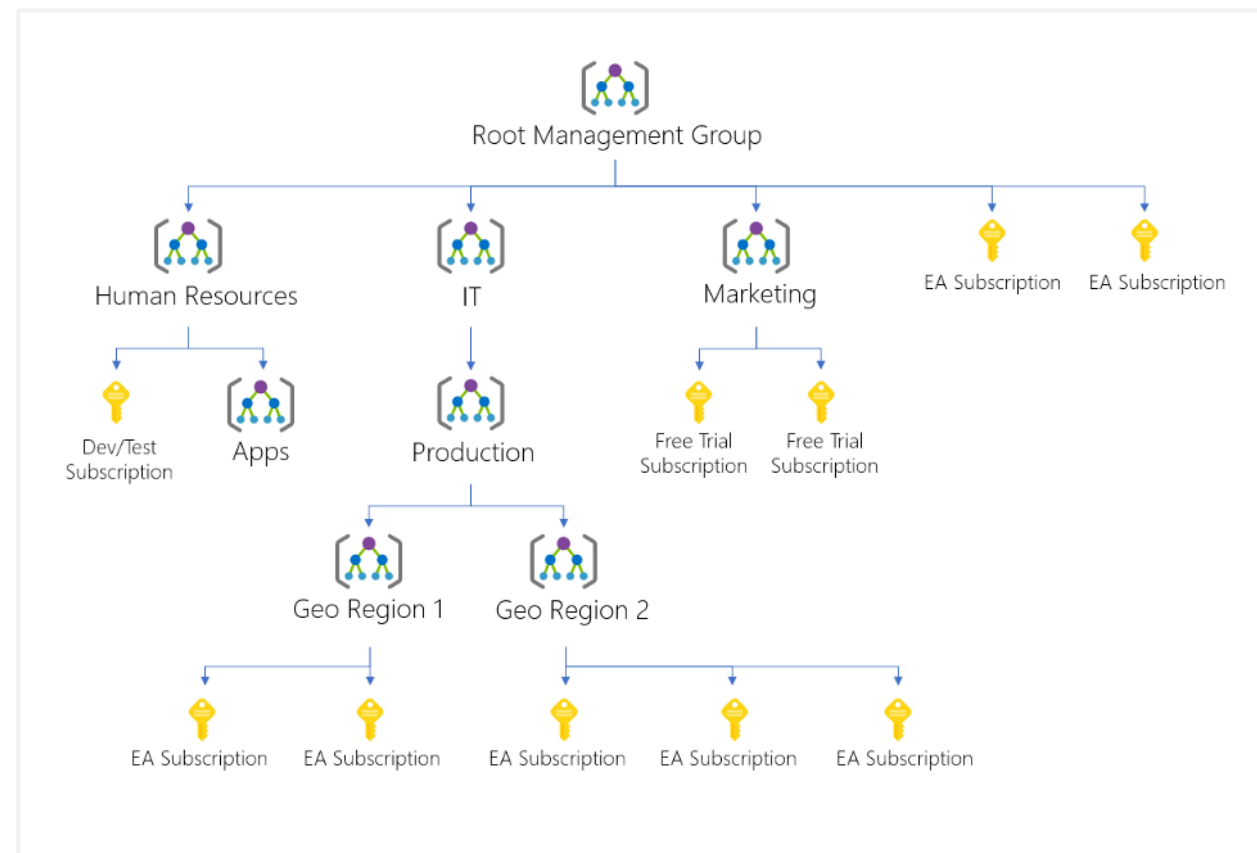

You can open a free support
case to increase limits to
published maximums

Create an Azure Resource Hierarchy

Management groups provides a level of scope above subscriptions

Target policies and spend budgets across subscriptions and inheritance down the hierarchies

Implement compliance and cost reporting by organization (business/teams)

* To prevent changes, apply resource locks at the subscription, resource group, or resources level

Apply Resource Tagging

Provides metadata for your Azure resources

Logically organizes resources

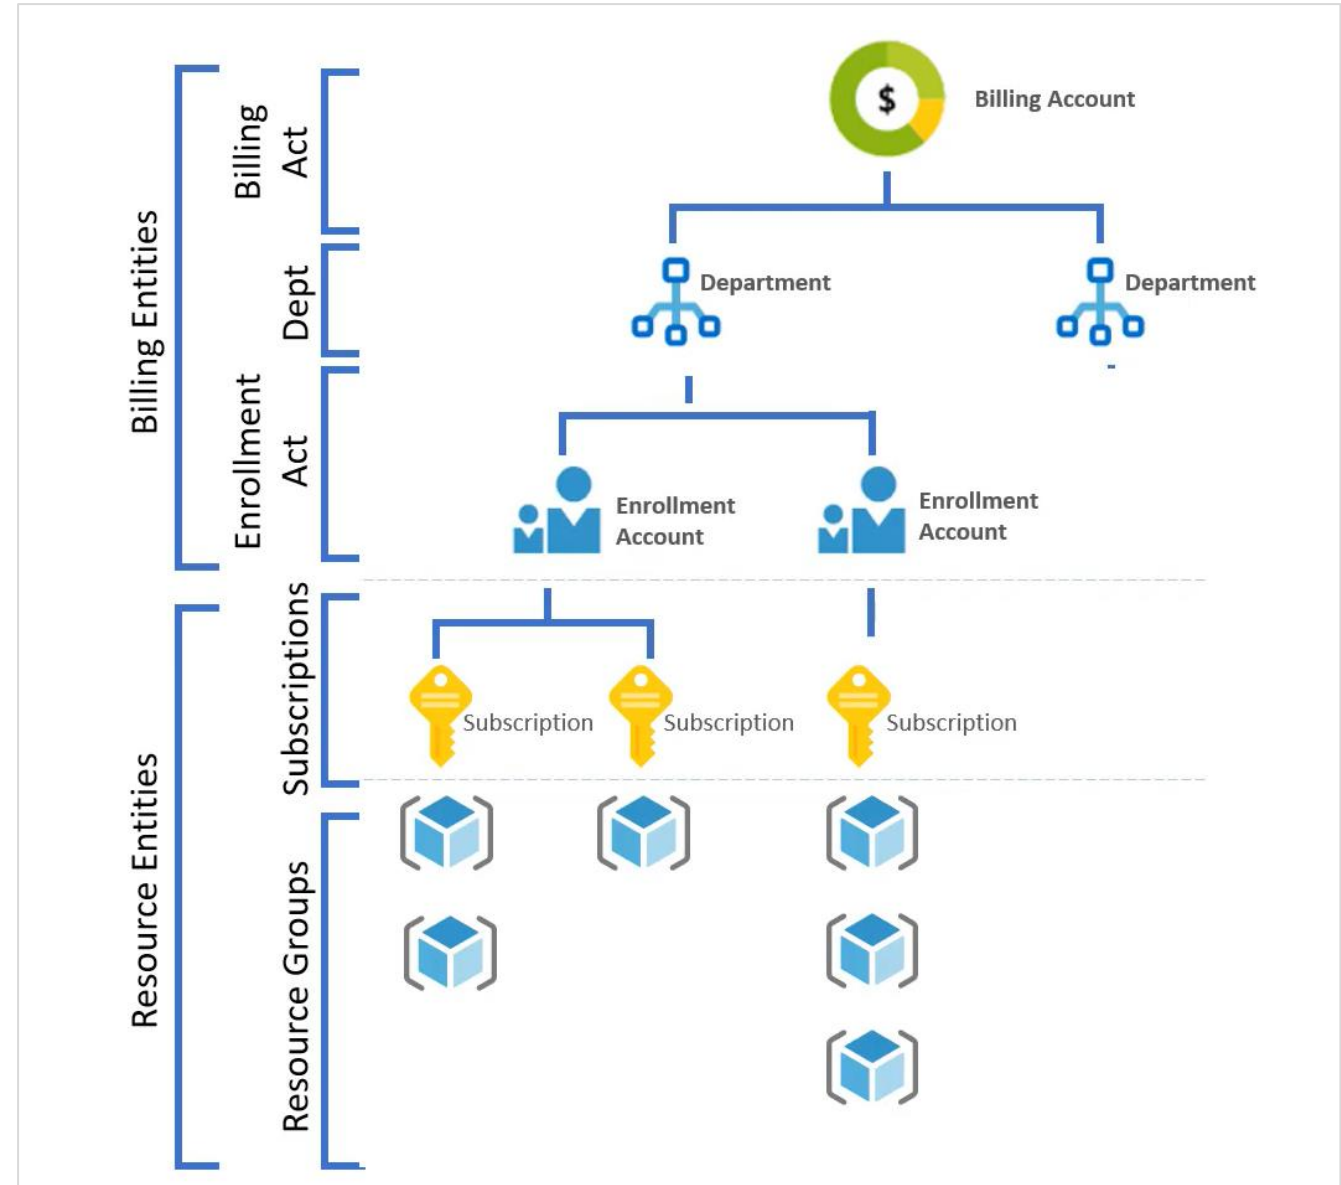

Consists of a name-value pair

Very useful for rolling up billing information

Manage Costs

- Costs are resource-specific
- Usage costs may vary between locations
- Costs for inbound and outbound data transfers differ
- Pre-pay with Azure reserved instances
- Use your on-premises licenses with Azure Hybrid Benefit
- Optimize with alerts, budgets, and Azure Advisor recommendations

Summary and Resources - Configure Subscriptions

Knowledge Check Questions

Configure Azure Policy

Deployment

Configure Azure Policy Introduction

Implement Azure Policy

Create Azure Policies

Demonstration – Azure Policies

- Create Policy Definitions
- Create and Scope the Initiative Definition
- Determine Compliance

Summary and Resources

Implement Azure Policies

A service to create, assign, and manage policies

Runs evaluations and scans for non-compliant resources

Advantages:

- Enforcement and compliance
- Apply policies at scale
- Remediation

Usage Cases

Allowed resource types – Specify the resource types that your organization can deploy

Allowed virtual machine SKUs – Specify a set of virtual machine SKUs that your organization can deploy

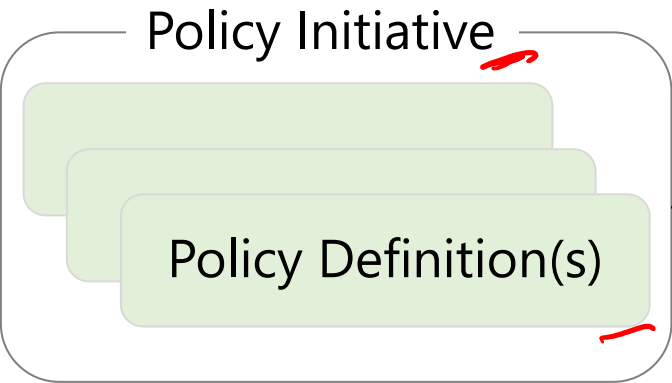

Allowed locations – Restrict the locations your organization can specify when deploying resources

Require tag and its value – Enforces a required tag and its value

Azure Backup should be enabled for Virtual Machines – Audit if Azure Backup service is enabled for all Virtual machines

Create Azure Policies

Define and create

Scope and assign

Assess compliance

Demonstration – Azure Policy

Assign a policy

Create and assign an initiative definition

Check for compliance

Check for remediation tasks

Remove your policy and initiative

Summary and Resources – Configure Azure Policy

[Build a cloud governance strategy on Azure](#)

Configure Role-Based Access Control

Configure Role-Based Access Control Introduction

Compare Azure RBAC Roles to Azure AD Roles

Create a Role Definition

Create a Role Assignment

Apply RBAC Authentication

Demonstration – Azure RBAC

Summary and Resources

Compare Azure RBAC Roles to Azure AD Roles

RBAC roles provide fine-grained access management

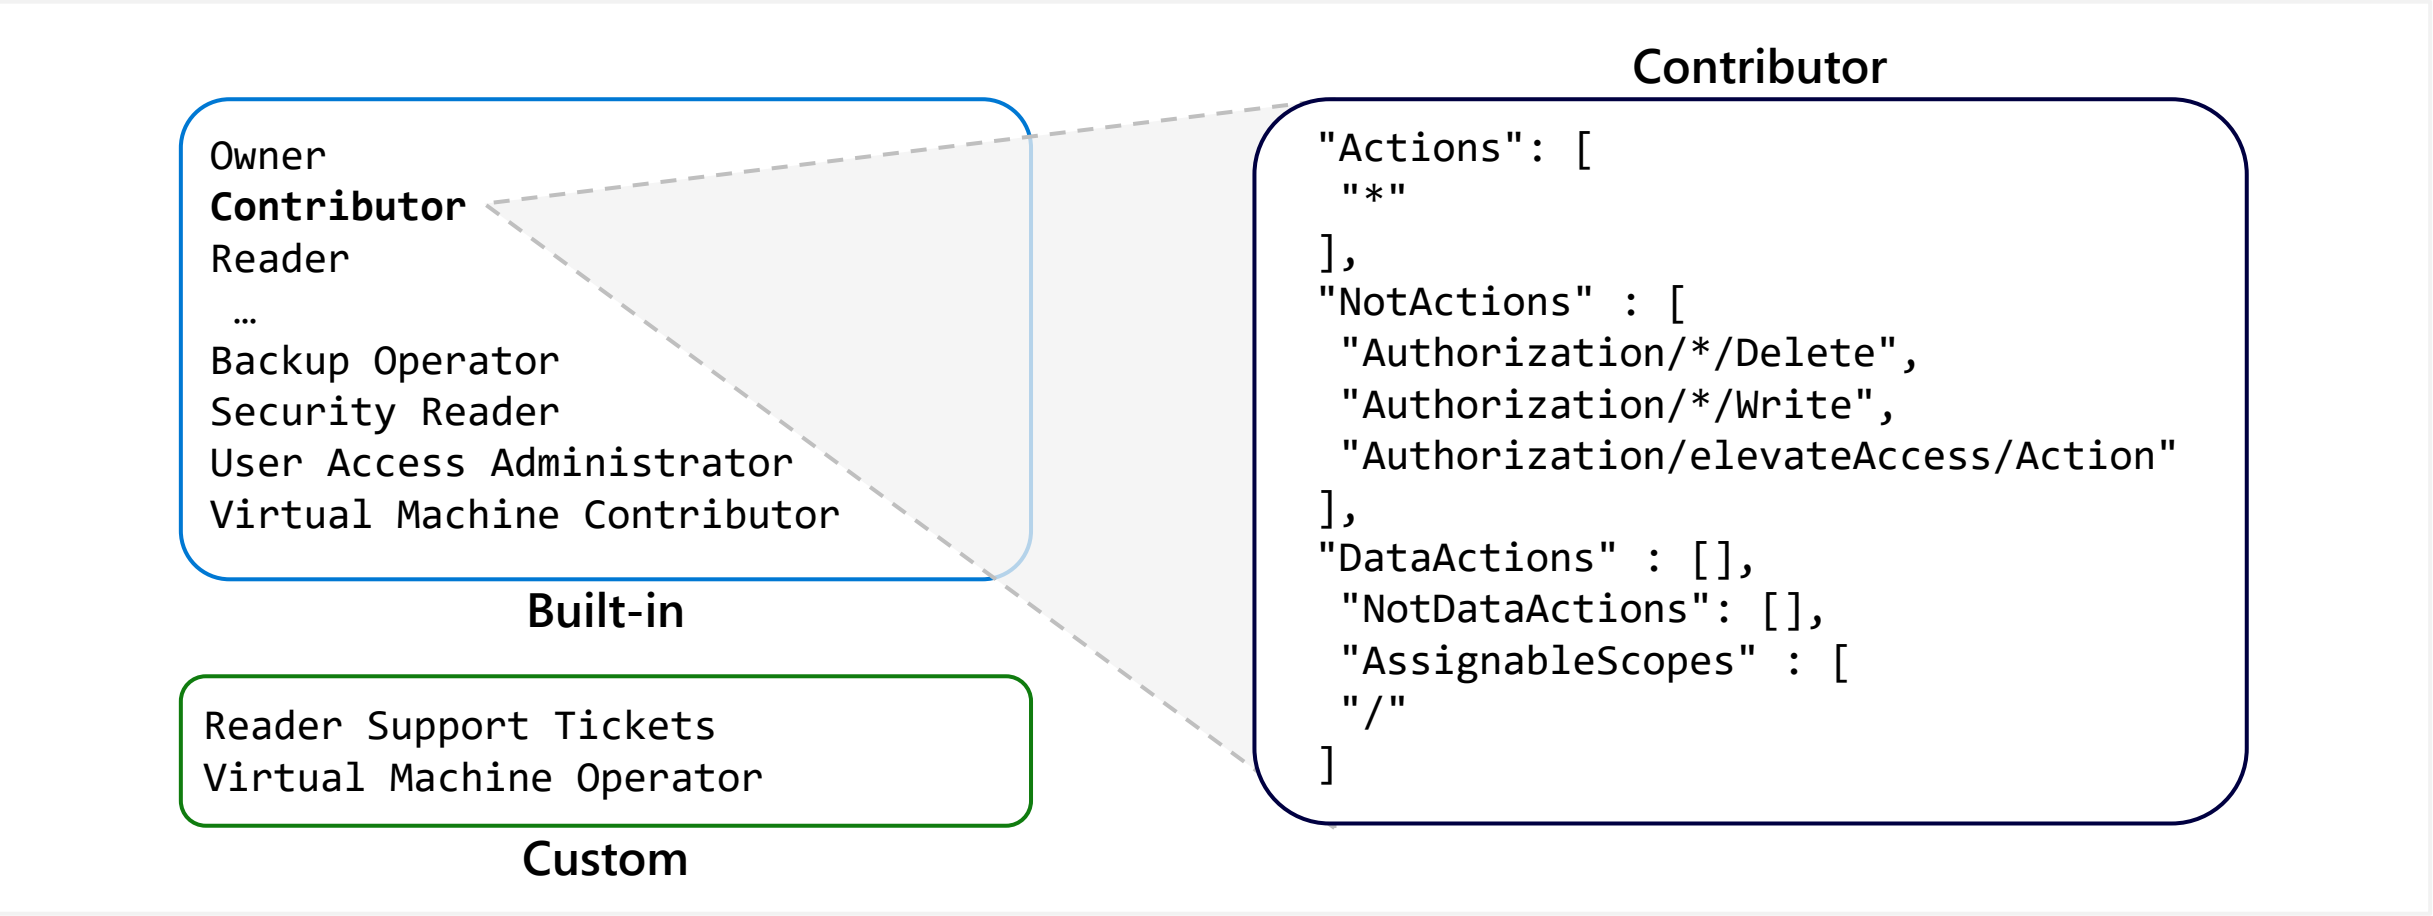

Azure RBAC roles	Azure AD roles	Tenant
Manage access to Azure resources	Manage access to Azure AD objects	
Owner Scope can be specified at multiple levels	Global Admin Scope is at the <u>tenant level</u>	
Role information can be accessed in the Azure portal, Azure <u>CLI</u> , Azure <u>PowerShell</u> , Azure Resource Manager templates, <u>REST API</u>	Role information can be accessed in Azure portal, Microsoft 365 admin portal, <u>Microsoft Graph</u> , Azure Active Directory PowerShell for Graph	

There are many built-in roles, or you can create your own custom role

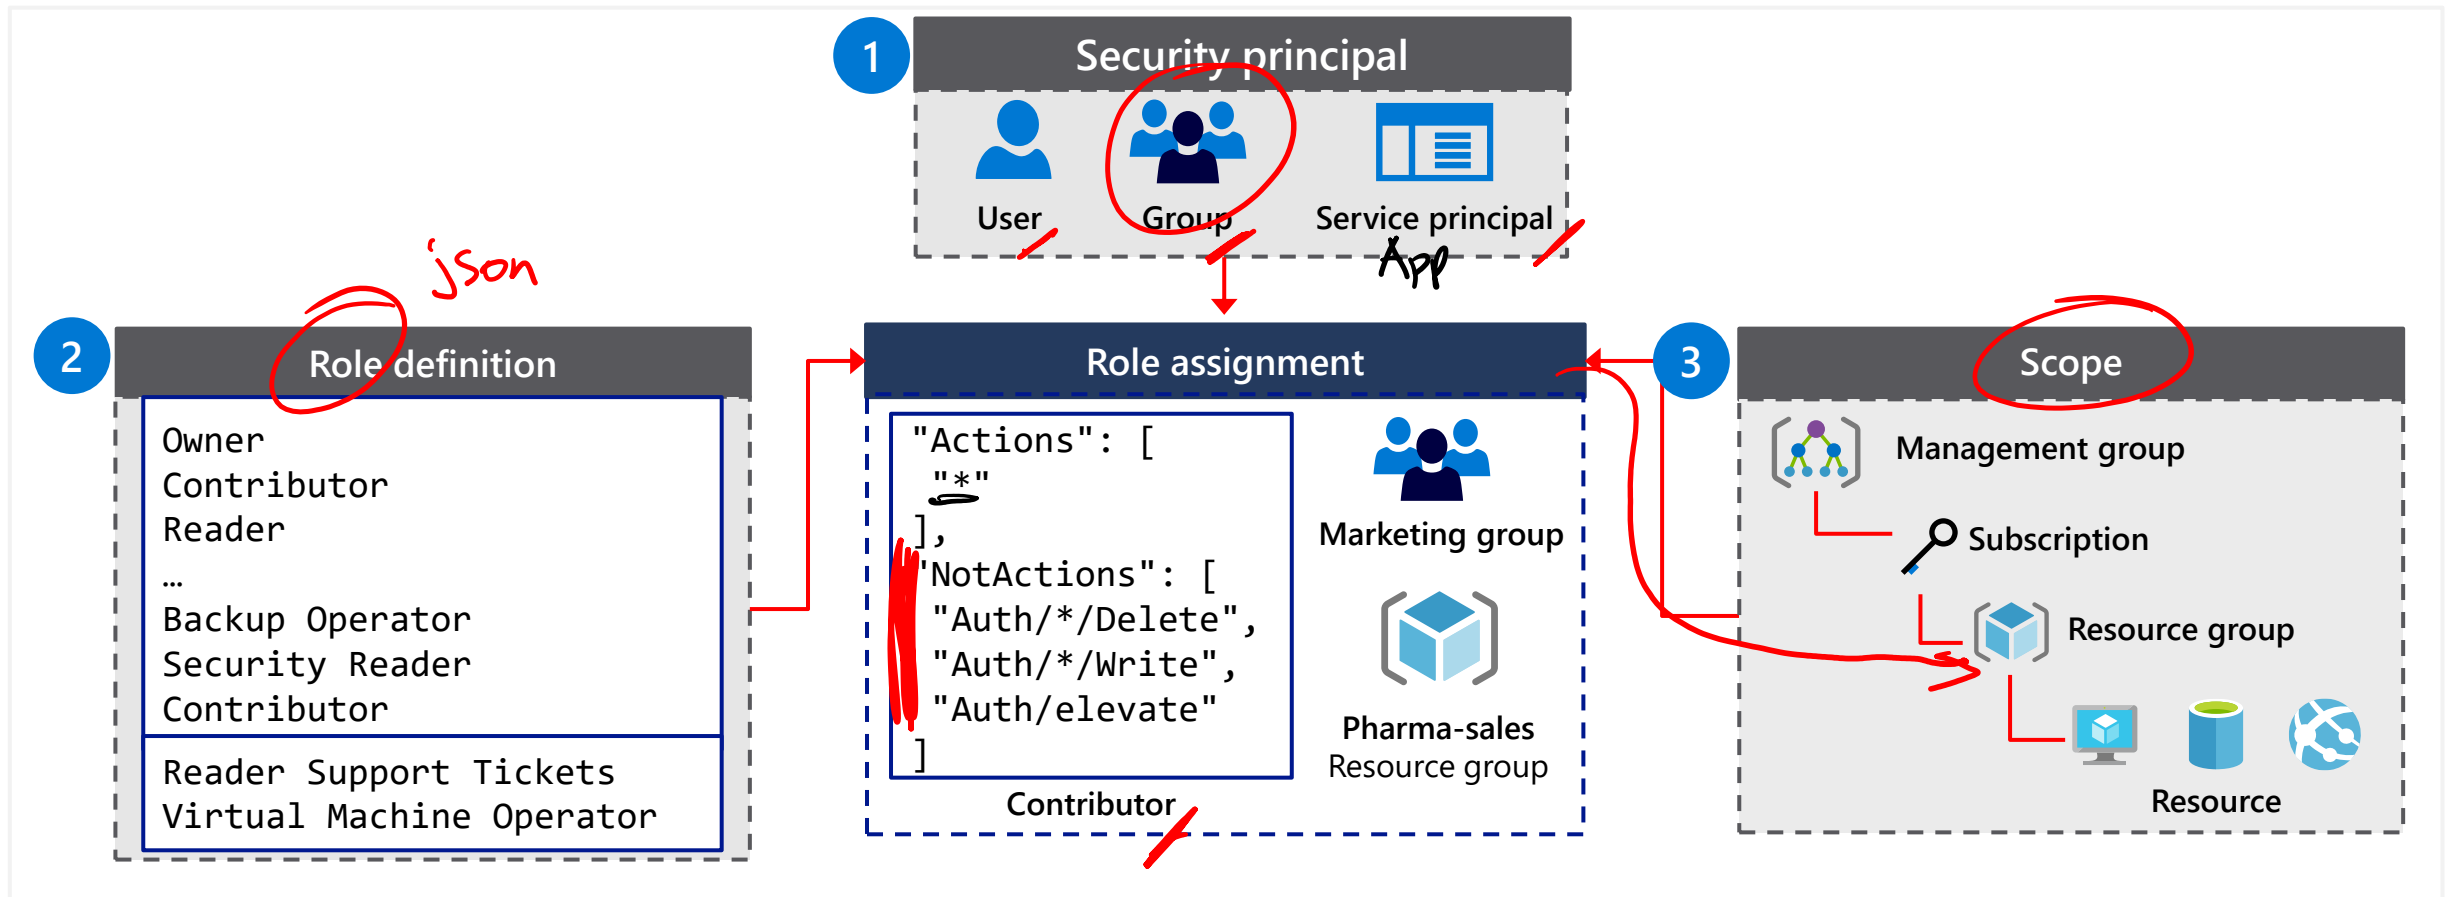

Create a Role Definition

Collection of permissions that lists the operations that can be performed

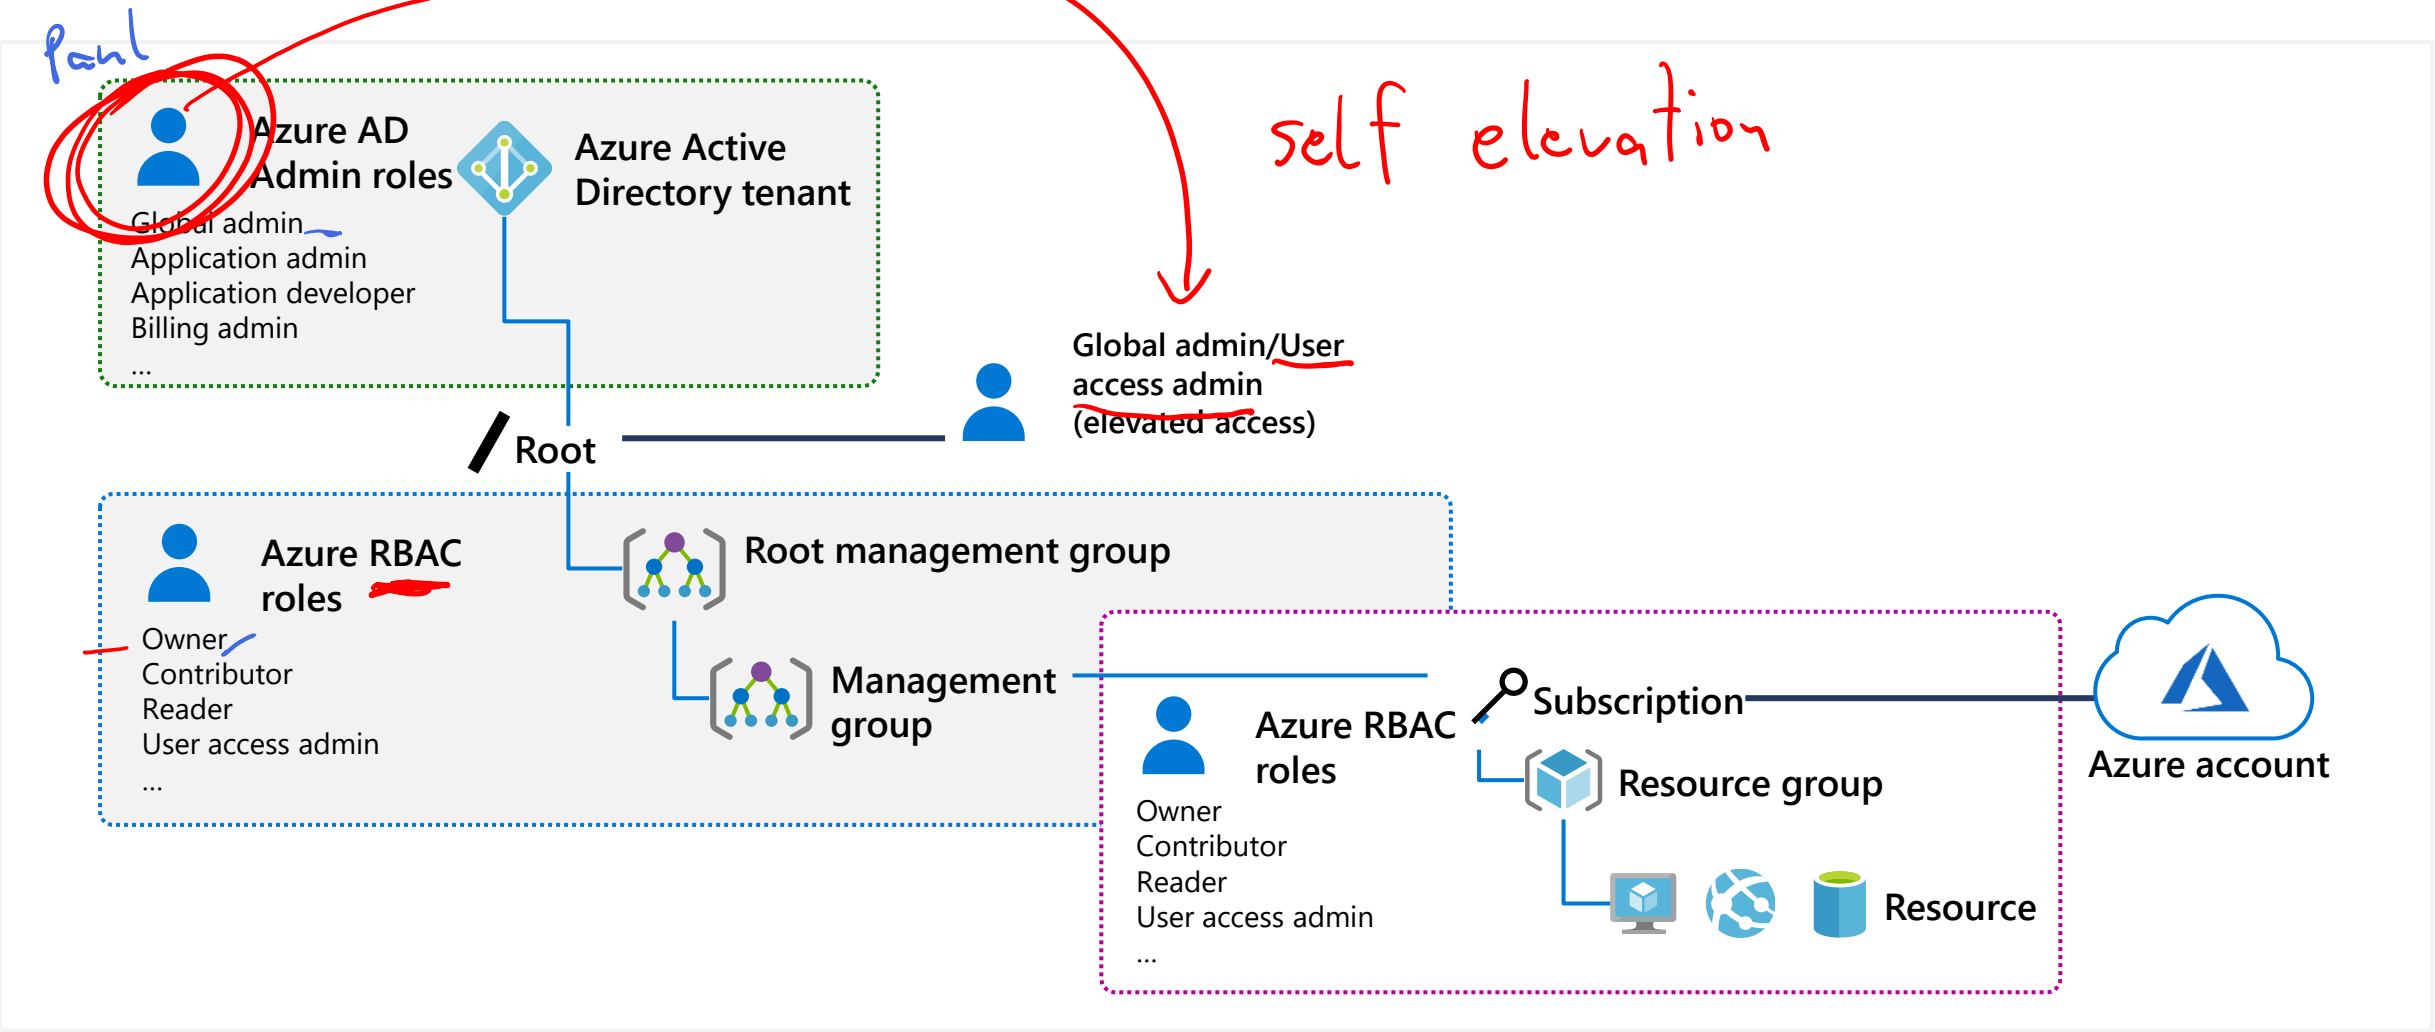

Create a Role Assignment

Process of binding a role definition to a user, group, or service principal at a scope for the purpose of granting access

Apply RBAC Authentication

Demonstration – Azure RBAC

Locate the Access Control blade

Review role permissions

Add a role assignment

Explore PowerShell commands

Summary and Resources – Configure RBAC

Knowledge Check

A *sandbox* indicates a hands-on exercise.

Lab 02a - Manage Subscriptions and RBAC
Lab 02b - Manage Governance via Azure Policy
Lab 03a – Manage Azure resources with the Azure portal

Lab 02a – Manage Subscriptions and Azure RBAC

Lab scenario

To improve the management of Azure resources in Contoso, you have been tasked with implementing the following functionality:

- Using management groups for the Contoso's Azure subscriptions
- Granting user permissions for submitting support requests. This user would only be able to create support request tickets and view resource groups

Objectives

Task 1:

Implement Management Groups

Task 2:

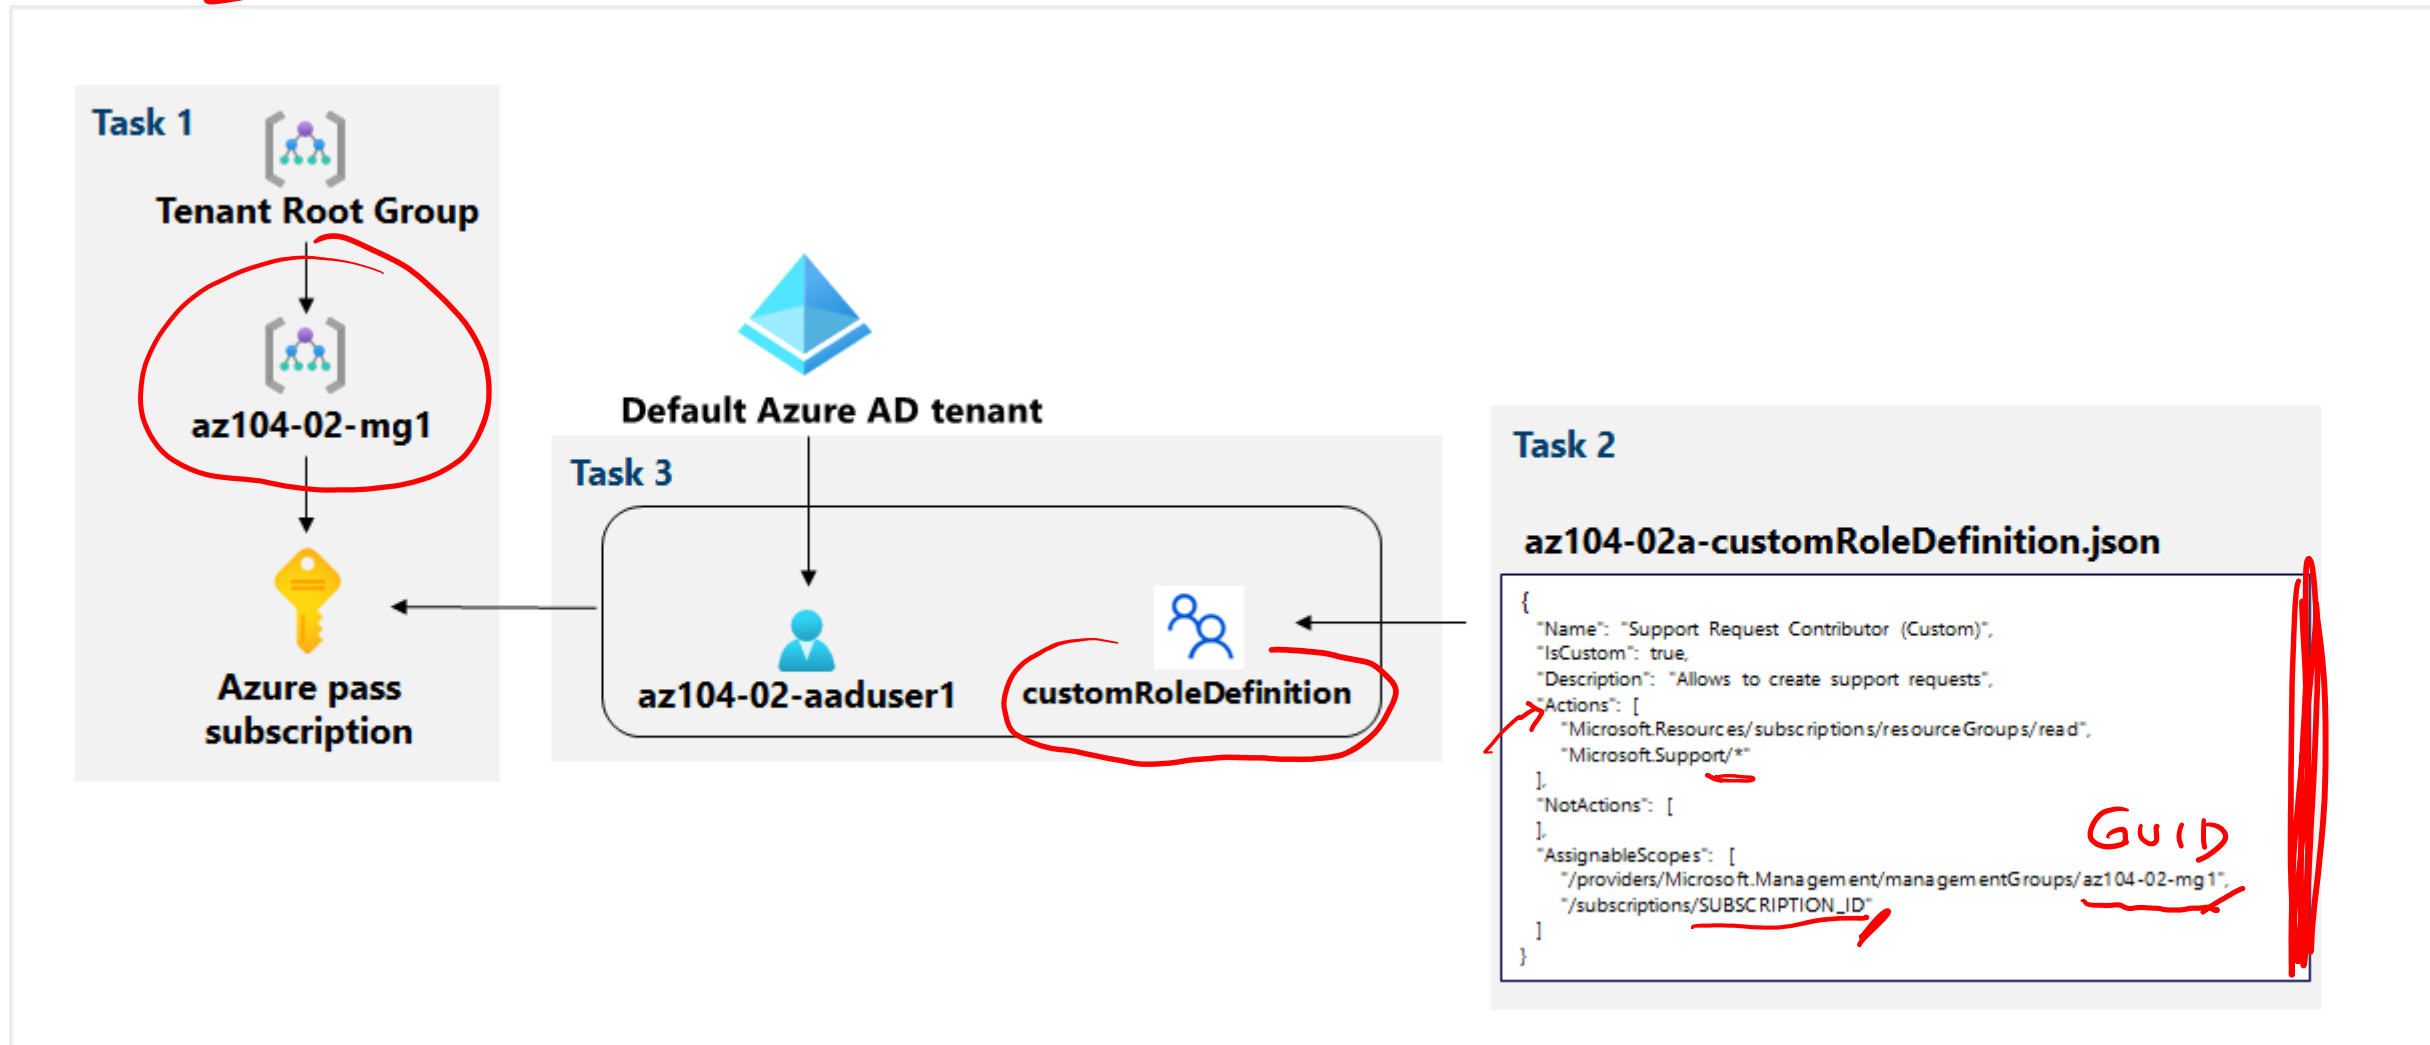

Create custom RBAC roles

Task 3:

Assign RBAC roles

Next slide for an architecture diagram 

Lab 02a – Architecture diagram

Lab 02b – Manage Governance via Azure Policy

Lab scenario

To improve management of Azure resources in Contoso, you have been tasked with implementing the following functionality:

- Tagging resource groups that include only infrastructure resources
- Ensuring that only properly tagged infrastructure resources can be added to infrastructure resource groups
- Remediating any non-compliant resources

Objectives

Task 1:

Create and assign tags via the Azure portal

Task 2:

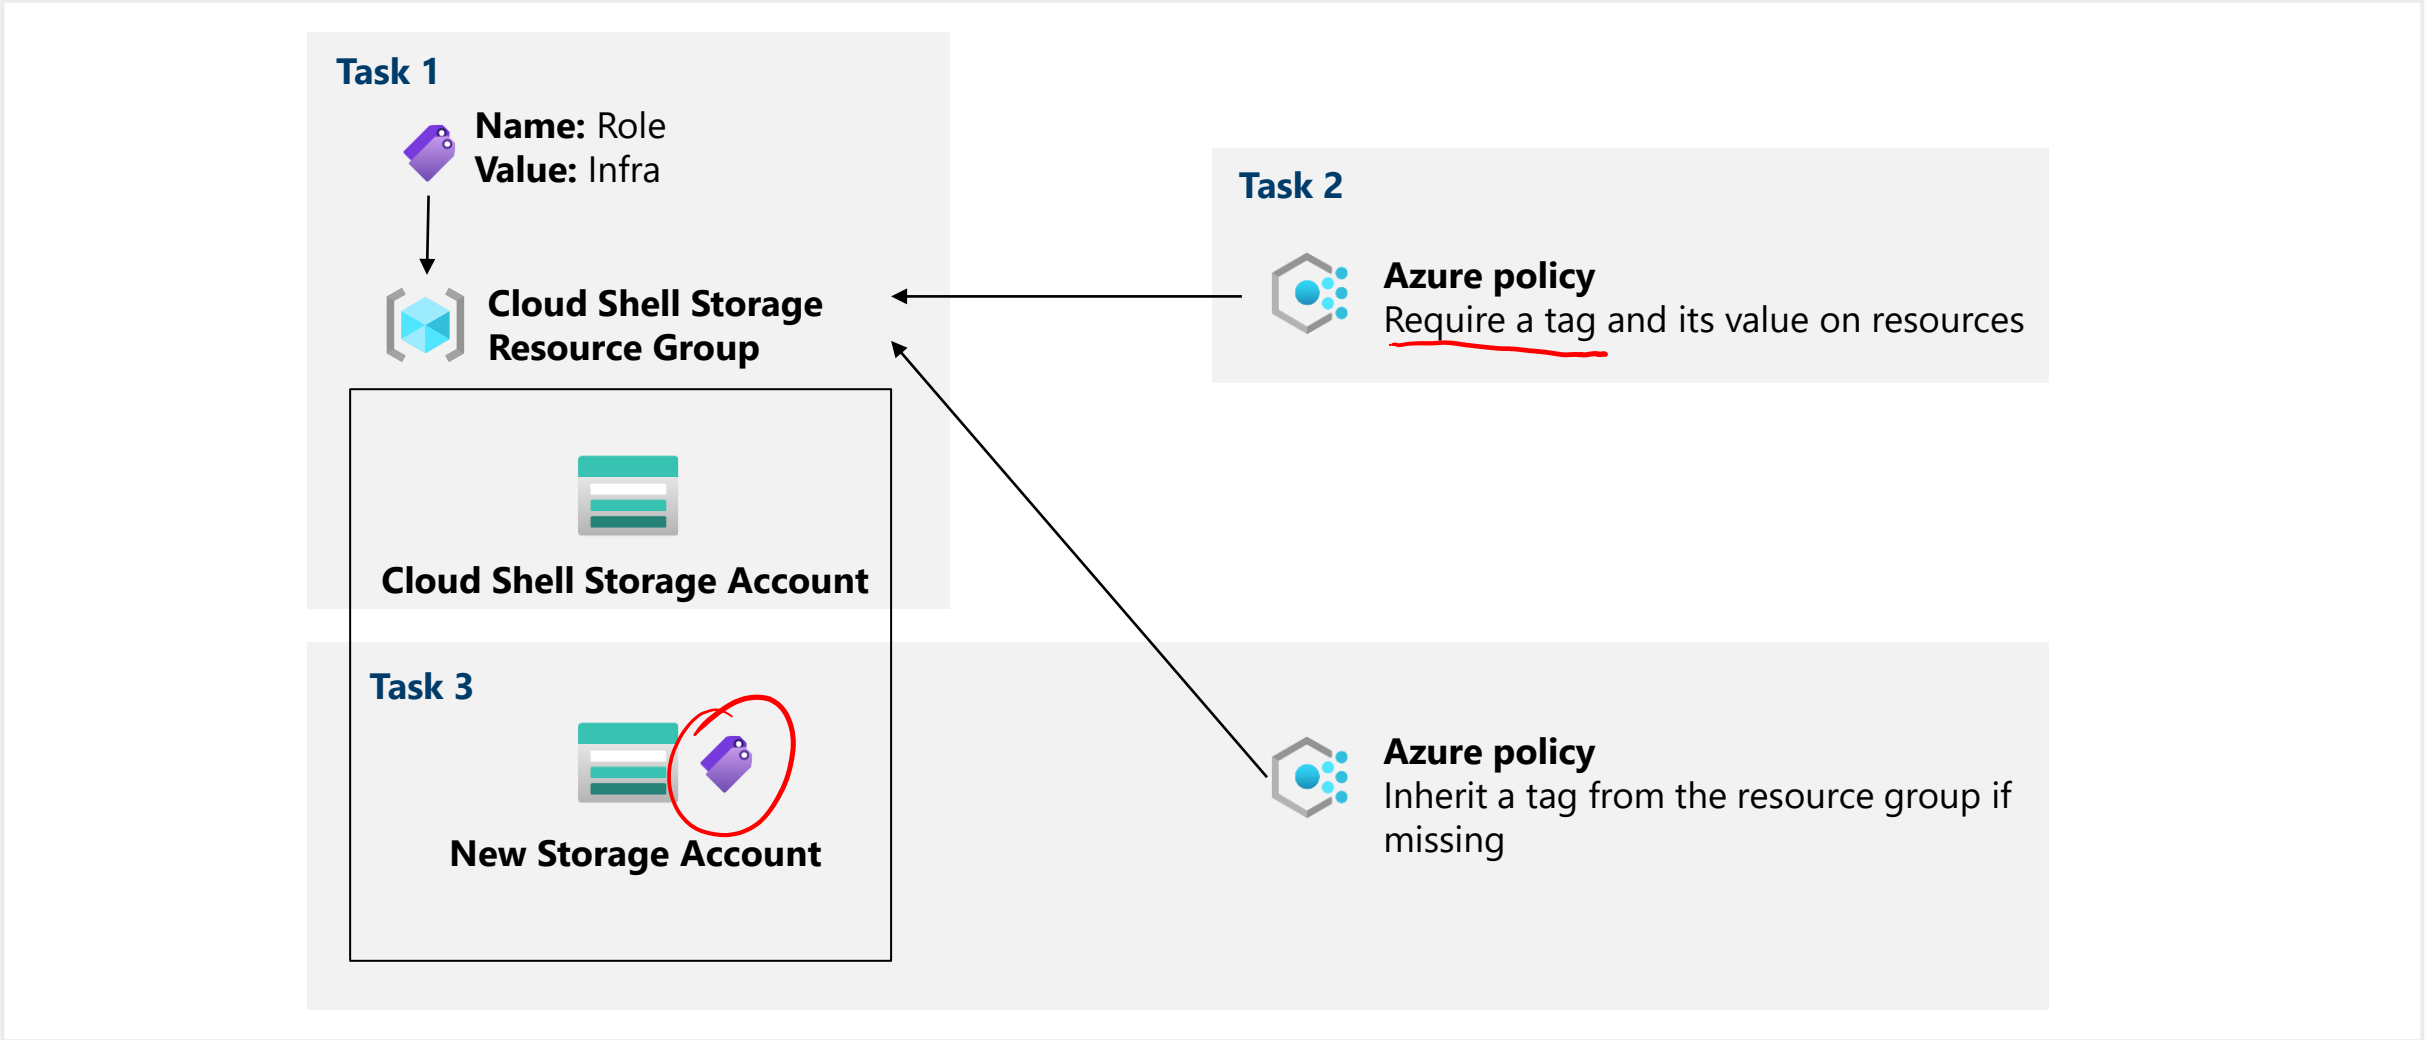

Enforce tagging via an Azure Policy

Task 3:

Apply tagging via an Azure Policy

Next slide for an architecture diagram 

Lab 02b – Architecture diagram

Lab 03a – Manage Azure resources with the Azure portal

Lab scenario

You need to explore the basic Azure administration capabilities associated with provisioning resources and organizing them based on resource groups, including moving resources between resource groups. You also want to explore options for protecting disk resources from being accidentally deleted, while still allowing for modifying their performance characteristics and size

Objectives

Task 1:

Create resource groups and deploy resources to resource groups

Task 2:

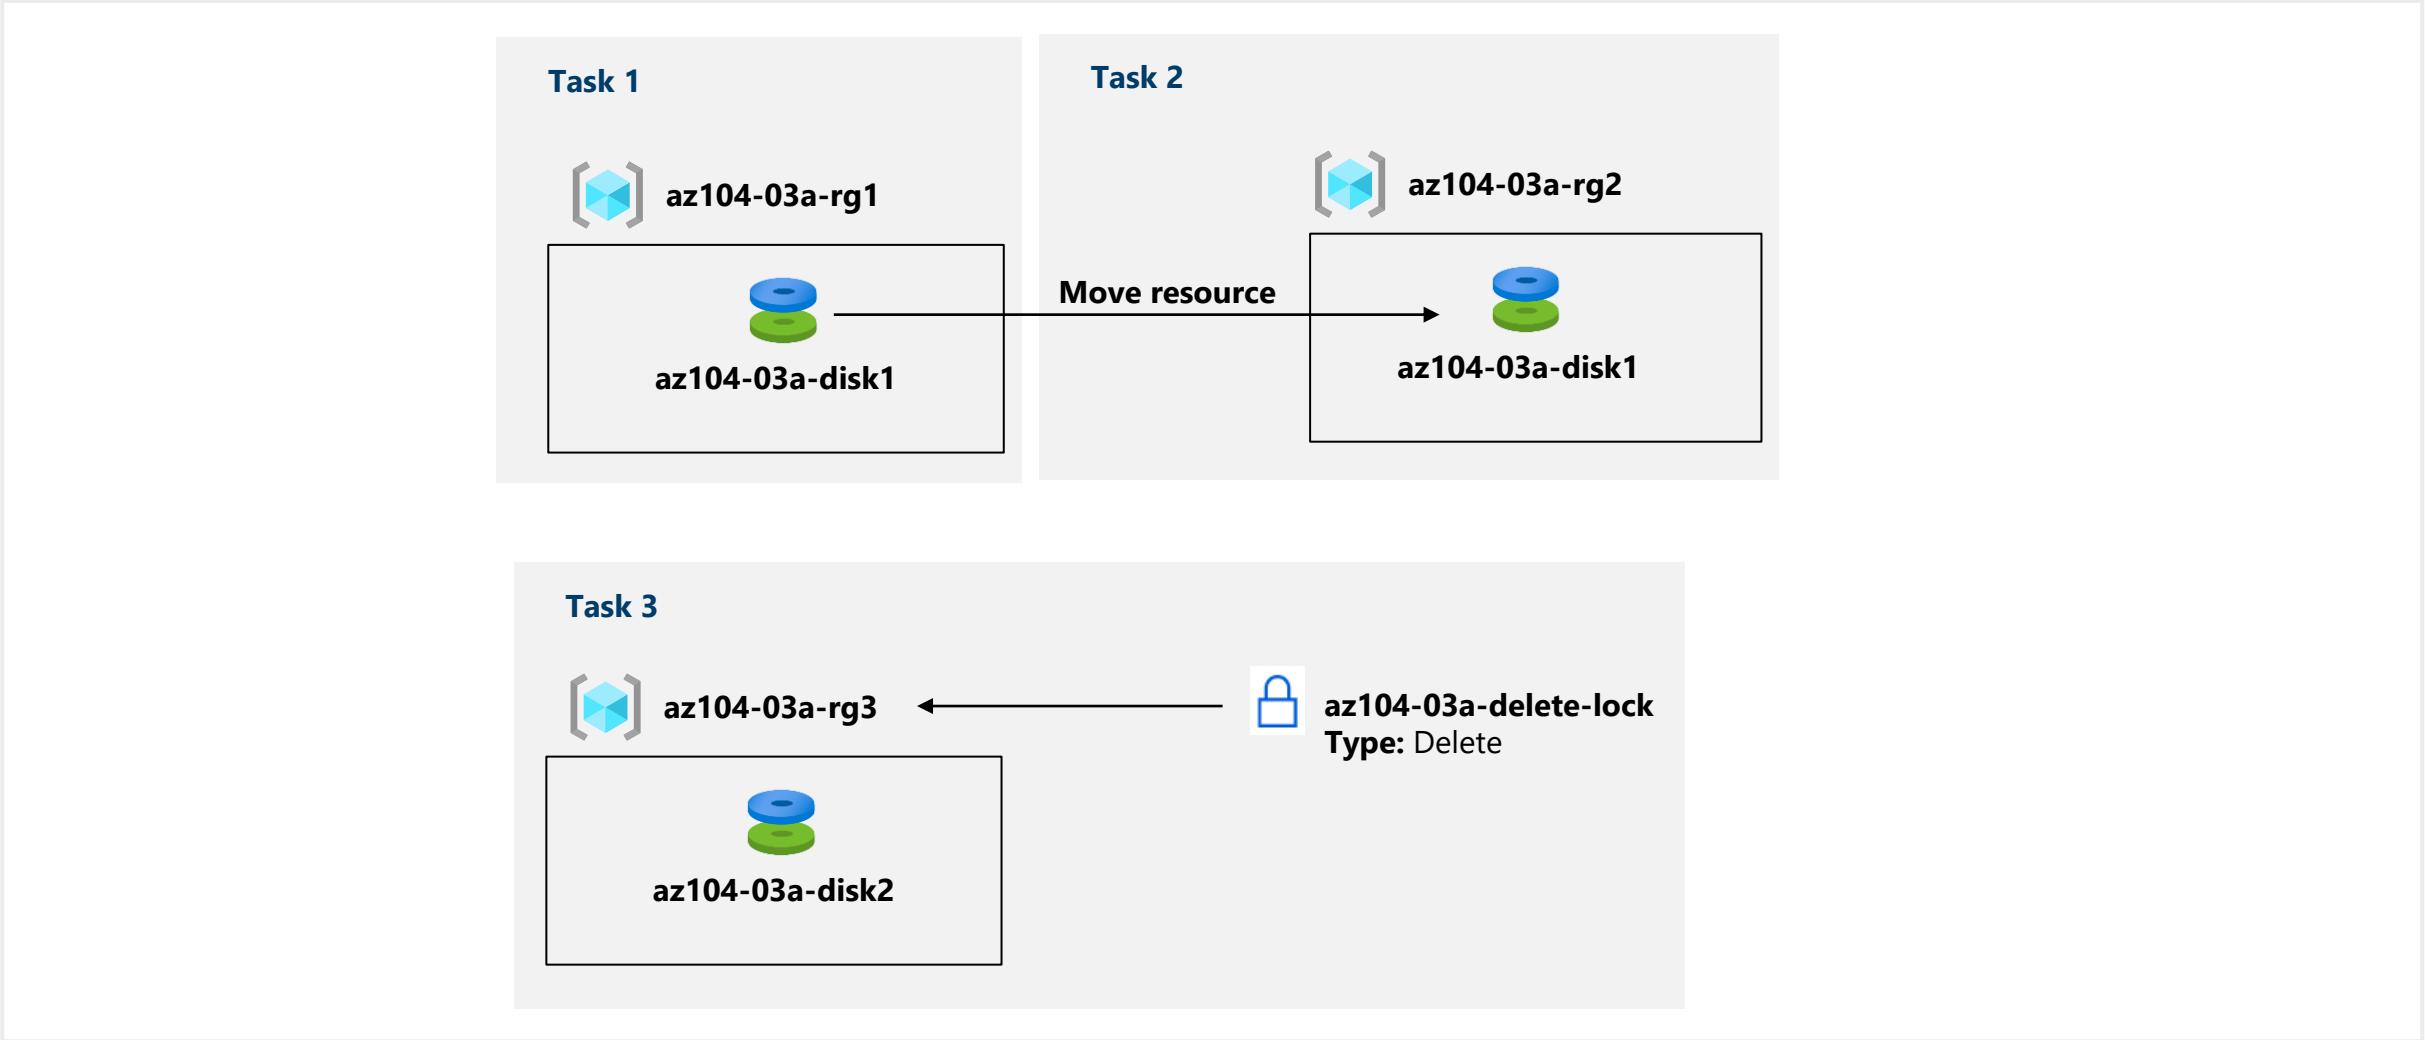

Move resources between resource groups

Task 3:

Implement and test resource locks

Next slide for an architecture diagram 

Lab 03a – Architecture diagram
