

AZ-104

Administer Data Protection

AZ-104 Course Outline

- 01: Administer Identity
- 02: Administer Governance and Compliance
- 03: Administer Azure Resources
- 04: Administer Virtual Networking
- 05: Administer Intersite Connectivity
- 06: Administer Network Traffic Management
- 07: Administer Azure Storage
- 08: Administer Azure Virtual Machines
- 09: Administer PaaS Compute Options
- 10: Administer Data Protection
- 11: Administer Monitoring

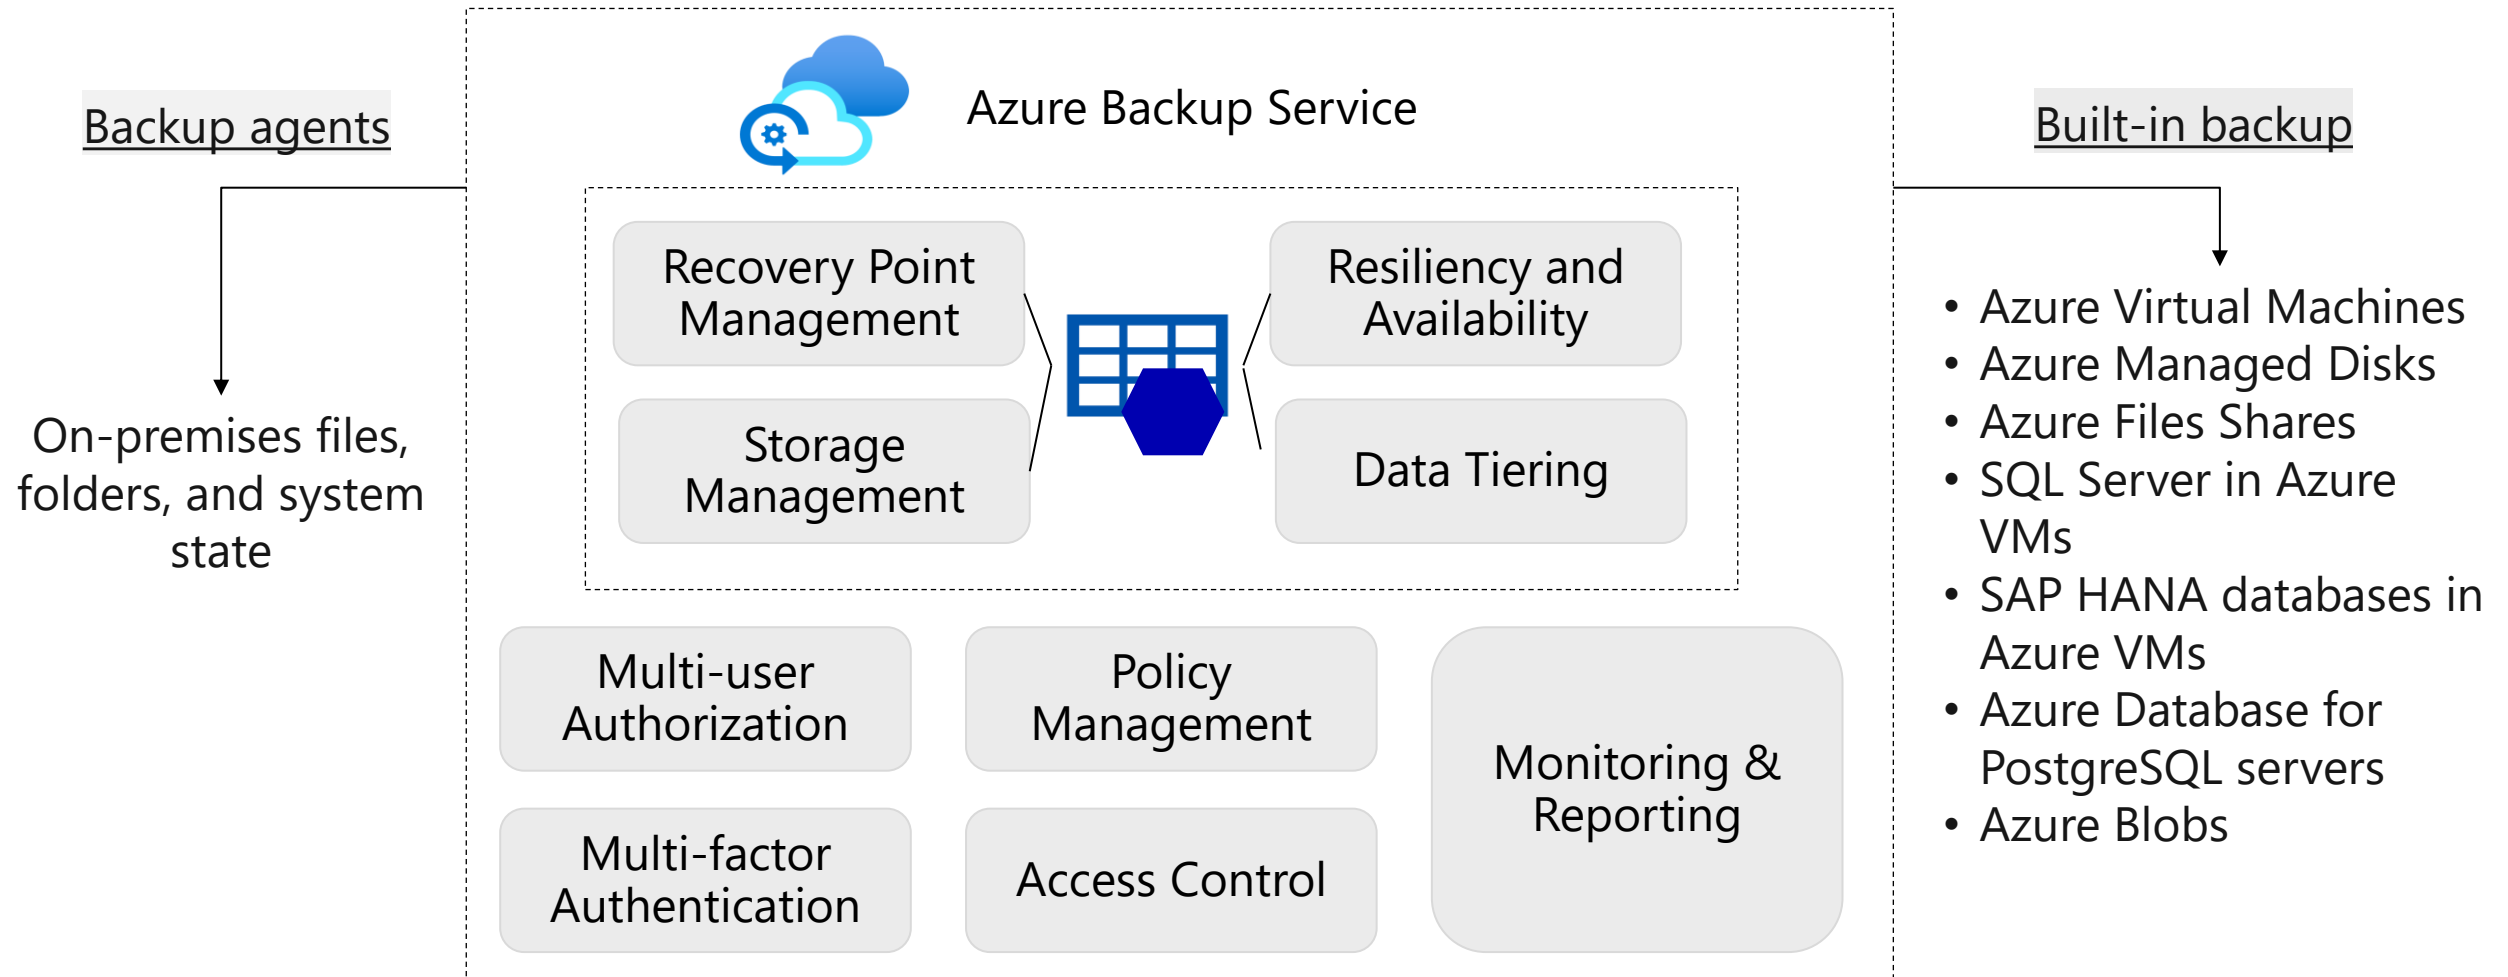

Learning Objectives - Administer Network Protection

- Introduction to Azure Backup
- Configure Virtual Machine Backups
- Lab 10 – Implement Data Protection

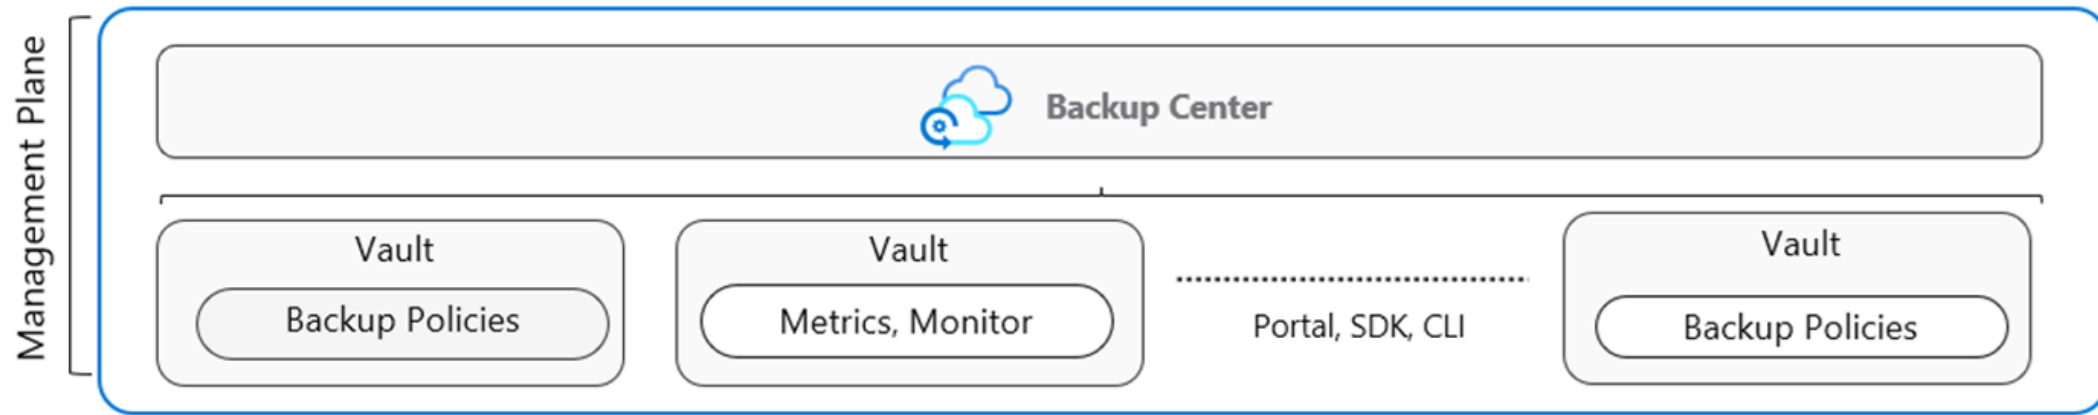

Introduction to Azure Backup

What is Azure Backup?

How Azure Backup works (vaults and policies)

- Vaults store backup copies, recovery points, and backup policies
- Two types of vaults: Backup vault and Recovery Service vault
- Backup Policies define the data source, storage vault, and backup schedule
- The Backup Center provides a single unified management experience (next slide)

Implement Azure Backup Center

Single pane of glass to manage backups across a large and distributed Azure environment

Datasource-centric management focused on what you are backing up

Connected experiences with native integrations that enables management at scale

The screenshot displays the Azure Backup Center 'Overview' page for 'Azure Virtual machines'. The interface includes a top navigation bar with a search box and buttons for Backup, Restore, Policy, Vault, and Refresh. A left-hand navigation pane lists various management and monitoring options. The main content area features a 'Jobs (last 24 Hours)' table and a 'Backup instances' section for 'Azure Virtual machines'.

Backup center Microsoft

Search (Ctrl+/) + Backup Restore Policy Vault Refresh

Overview

Getting started

Community

Manage

- Backup instances
- Backup policies
- Vaults

Monitoring + reporting

- Backup jobs
- Backup reports

Policy and compliance

- Backup compliance
- Azure policies for backup
- Protectable datasources

Support + troubleshooting

- New support request

Datasource type: Azure Virtual machines

Overview of Jobs and Backup instances

Jobs (last 24 Hours) [View all](#)

Operation	Failed	In progress	Completed
Scheduled backup	0	0	2
On-demand backup	0	0	0
Restore	0	0	0

Backup instances

Azure Virtual machines

2	Protection configured	2
	Protection stopped	0
	Soft deleted	0

0 out of 2 Backup instances with the underlying datasource not found

Learning Recap – Introduction to Azure Backup

study

- Introduction to Azure Backup

Configure Virtual Machine Backups

Explore options to protect virtual machine data

Snapshots

Managed snapshots provide a quick and simple option for backing up VMs that use Managed Disks

Azure Backup

Azure Backup supports application-consistent backups for both Windows and Linux VMs

Azure Site Recovery

Azure Site Recovery protects your VMs from a major disaster scenario when a whole region experiences an outage

Create virtual machine snapshots in Azure Backup

Use snapshots taken as part of a backup job

Reduces recovery wait times – don't wait for data transfer to the vault to finish

Configure Instant Restore retention (standard or enhanced)

Set up Azure Recovery Services vault backup options

Multiple servers can be protected using the same Recovery Services vault

Azure Workloads

Recovery Services vault

Where is your workload running?

On-Premises

▼

What do you want to backup?

4 selected

^

☐ Files and folders

☒ Hyper-V Virtual Machines

☒ VMware Virtual Machines

☐ Microsoft SQL Server

☐ Microsoft SharePoint

☐ Microsoft Exchange

☒ System State

☒ Bare Metal Recovery

Step: Prepare Infrastructure

Prepare Infrastructure

Backup Virtual Machines

Create a recovery services vault

1

Use the Portal to define the backup

2

Backup the virtual machine

3

Use a Recovery Services Vault in the region where you are performing your Virtual Machine backups and choose a replication strategy for Vault

Take snapshots (recovery points) of your data at defined intervals. These snapshots are stored in recovery services vaults

For the Backup extension to work, the Azure VM Agent must be installed on the Azure virtual machine

Restore Virtual Machines

Once you trigger the restore operation, the Backup service creates a job for tracking the restore operation

The Backup service also creates and temporarily displays notifications, so you monitor how the backup is proceeding

Backup status
Backup Pre-Check  Passed
Last backup status  Success 3/12/2020, 12:20:38 AM

Restore points (30)

CRASH CONSISTENT	APPLICATION CONSISTENT	FILE-SYSTEM CONSISTENT
30	0	0
Time	Consistency	
	↑↓	
3/12/2020, 12:20:42 AM	Crash Consistent	
3/11/2020, 12:20:59 AM	Crash Consistent	

Implement Azure Site Recovery

- Manages the orchestration of disaster recovery
- Replicates workloads continuously from a primary location or region to a secondary location
- Failover to shift to the secondary location; failback to return to the primary location

Learning Recap – Configure Virtual Machine Backups

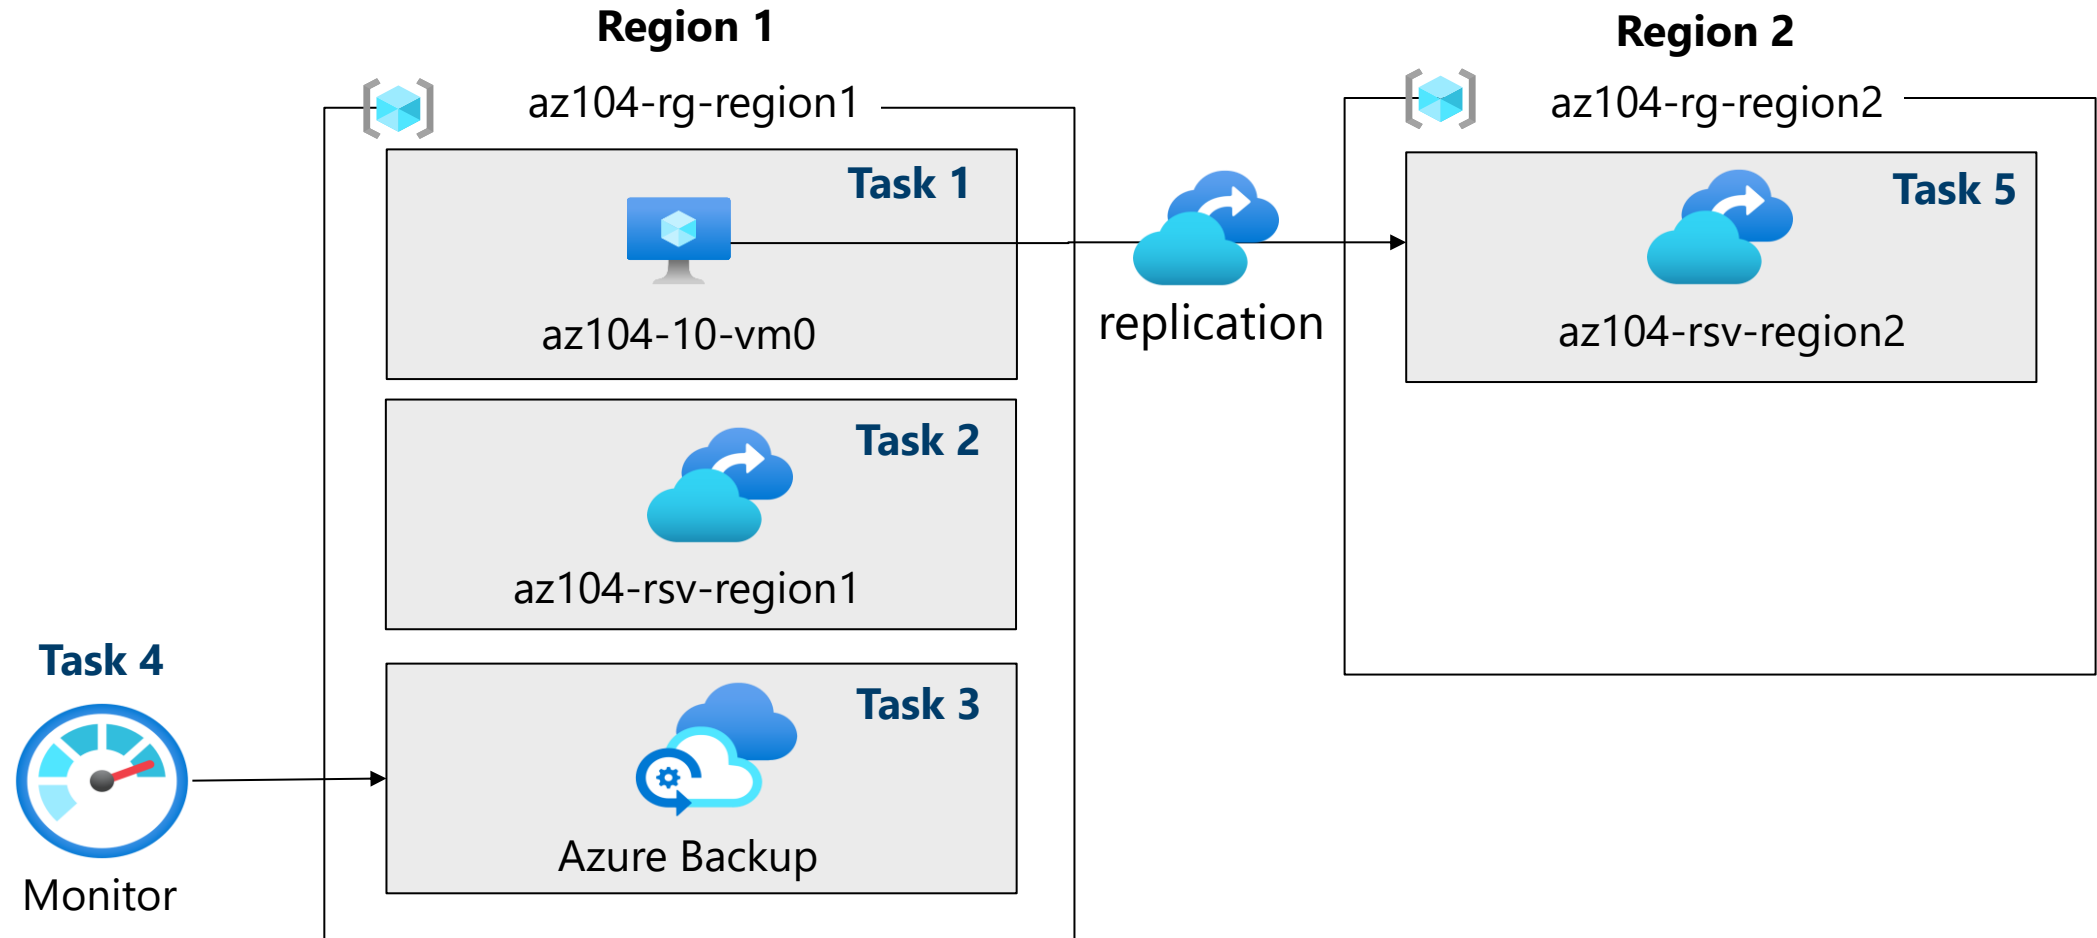

**Check your
knowledge
questions and
additional
study**

- Introduction to Azure Backup
- Protect your virtual machines by using Azure Backup
- Implement hybrid backup and recovery with Windows Server IaaS
- Protect your Azure infrastructure with Azure Site Recovery

Lab – Implement Data Protection

Lab 10 – Architecture diagram
