Administer Monitoring

About this course: Course Outline

01: Administer Identity

02: Administer Governance and Compliance

03: Administer Azure Resources

04: Administer Virtual Networking

05: Administer Intersite Connectivity

06: Administer Network Traffic Management

07: Administer Azure Storage

08: Administer Azure Virtual Machines

09: Administer PaaS Compute Options

10: Administer Data Protection

11: Administer Monitoring

Administer Monitoring Introduction

Configure Azure Monitor

Configure Azure Monitor

Configure Azure Monitor Introduction

Describe Azure Monitor Key Capabilities

Describe Azure Monitor Components

Define Metrics and Logs

Identify Data Types

Describe Activity Log Events

Query the Activity Log

Summary and Resources

Describe Azure Monitor Key Capabilities

Monitor & Visualize Metrics

Metrics are numerical values available from Azure Resources helping you understand the health, operation & performance of your systems.

[Explore Metrics](#)

Query & Analyze Logs

Logs are activity logs, diagnostic logs and telemetry from monitoring solutions; Analytics queries help with troubleshooting & visualizations.

[Search Logs](#)

Setup Alert & Actions

Alerts notify you of critical conditions and potentially take corrective automated actions based on triggers from metrics or logs.

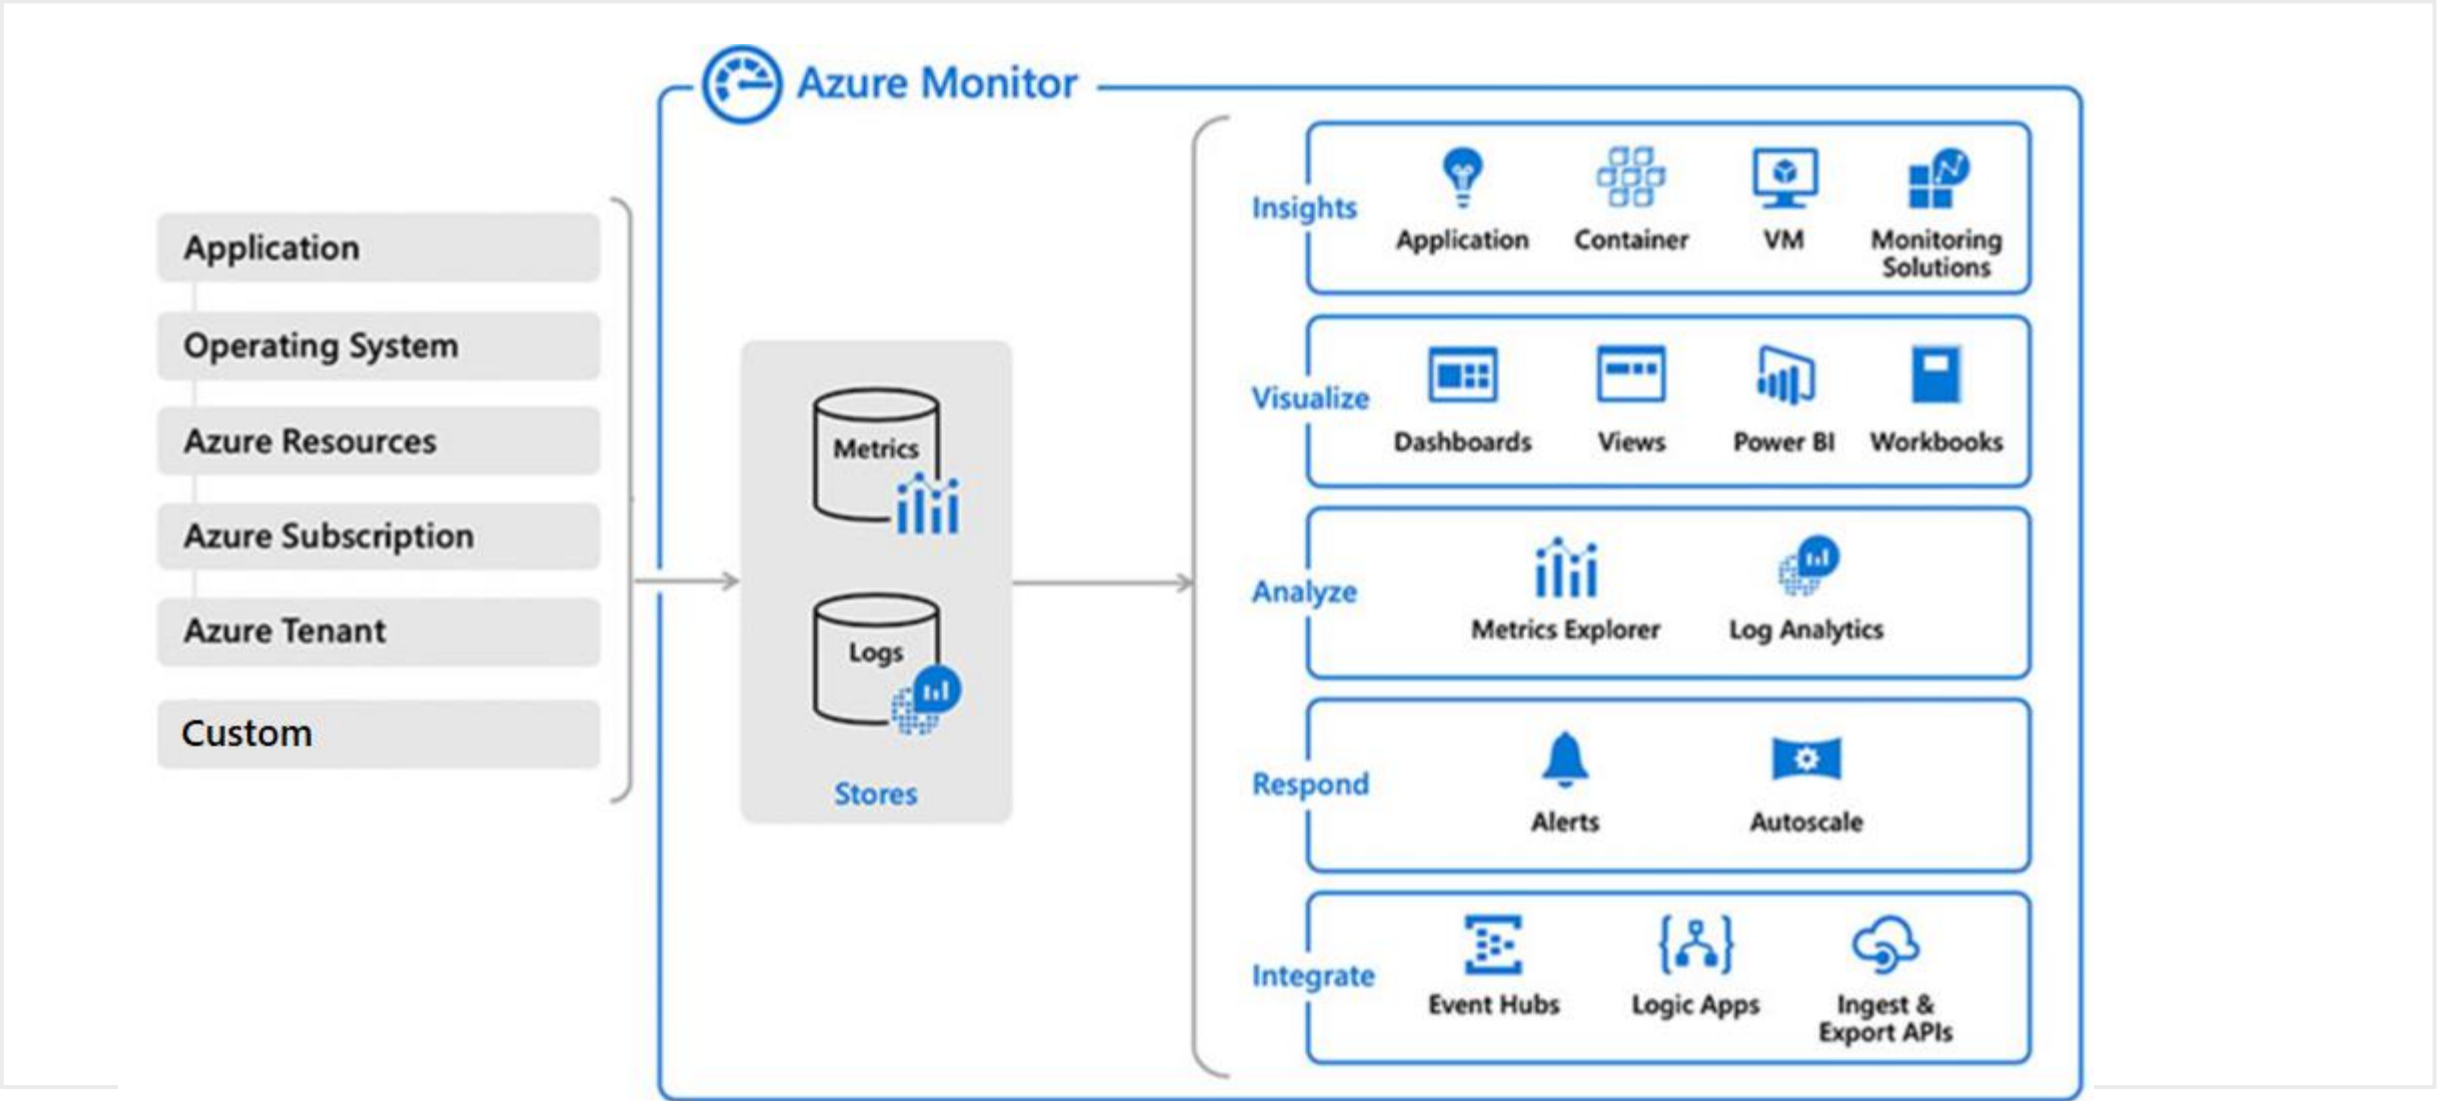

[Create Alert](#)

Core monitoring for
Azure services

Collects metrics, activity
logs, and diagnostic logs

Use for time critical alerts
and notifications

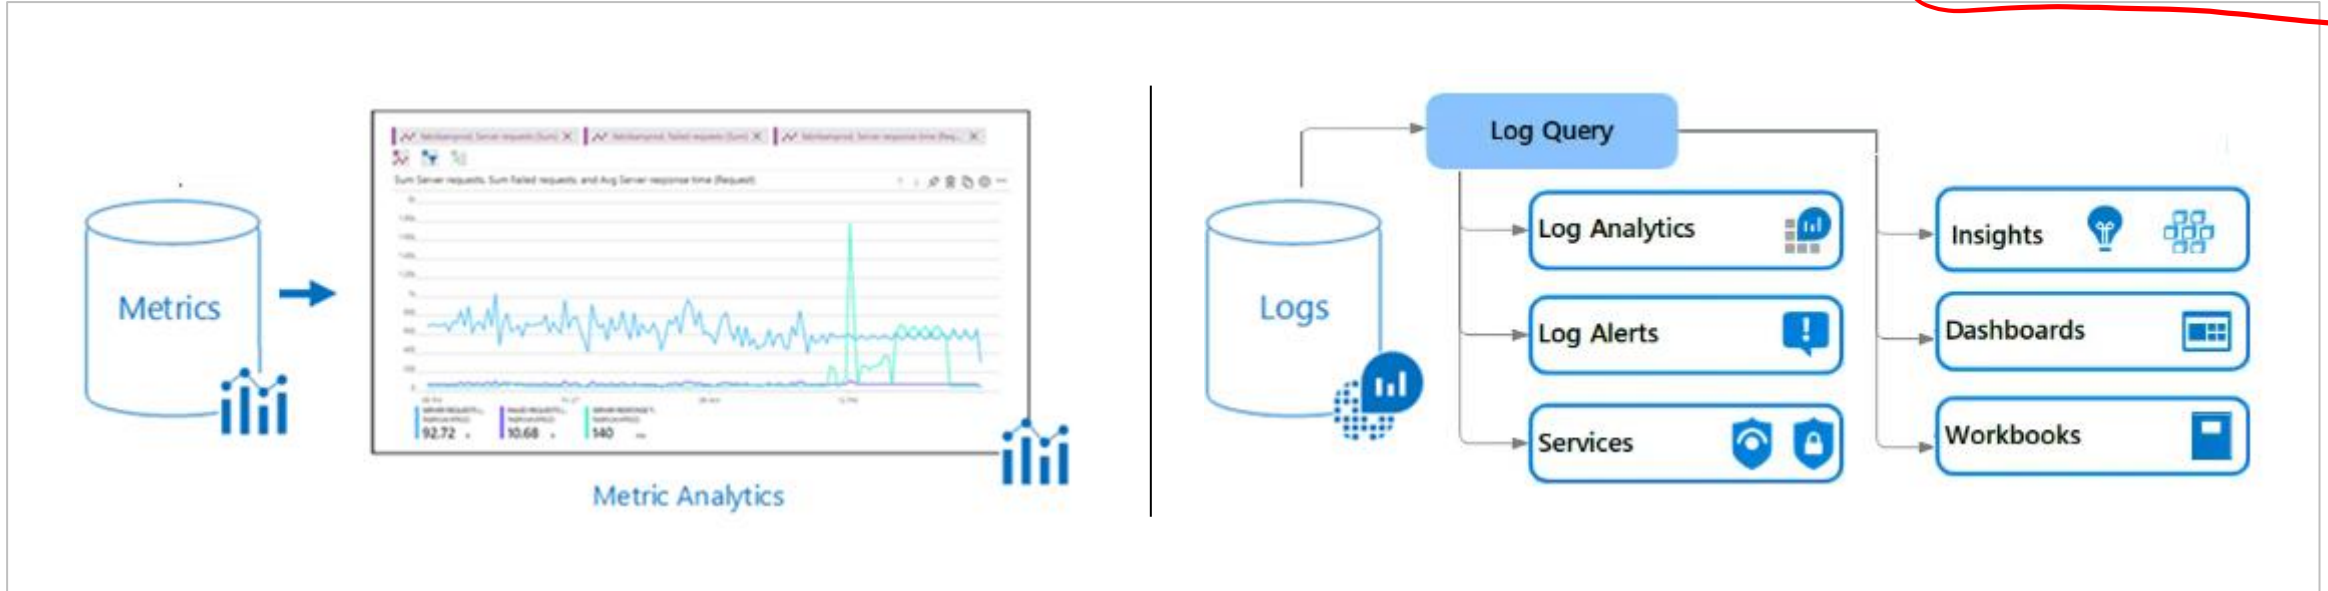

Understand Azure Monitor Components

Define Metrics and Logs

Sentinel

KQL

- Metrics are numerical values that describe some aspect of a system at a point in time
- They are lightweight and capable of supporting near real-time scenarios

- Logs contain different kinds of data organized into records with different sets of properties for each type
- Telemetry (events, traces) and performance data can be combined for analysis

Identify Data Types

Application monitoring data – Performance and functionality of the code you have written, regardless of its platform

Guest OS monitoring – Azure, another cloud, or on-premises

Azure resource monitoring

Azure subscription monitoring – Operation and management of an Azure subscription, as well as data about the health and operation of Azure itself

Azure tenant monitoring – Operation of tenant-level Azure services, such as Azure Active Directory

Describe Activity Log Events

Send data to Log Analytics for advanced search and alerts

Query or manage events in the Portal, PowerShell, CLI, and REST API

Stream information to Event Hub

Archive data to a storage account

Analyze data with Power BI

Query the Activity Log

Activity log

Edit columns

Refresh

Diagnostics settings

Download as CSV

Logs

Pin current filters

Search

Quick Insights

Add Filter

Management Group : None

Subscription : 2 selected

Timespan : Last 6 hours

Event severity : All

Operation name	Status	Time	Time stamp	Subscription
> Create or Update Virtual Network Subnet	Failed	a minute ago	Thu Mar 12 ...	ASC DEMO
> Write GuestConfigurationAssignments	Succeeded	17 minutes ...	Thu Mar 12 ...	ASC DEMO
> Gets workflow recommend operation groups	Succeeded	29 minutes ...	Thu Mar 12 ...	ASC DEMO

Filter by Management group, Subscription, Timespan, and Event Severity

Add a filter, like Event Category (Security, Recommendations, Alerts)

Pin current filters and download as CSV

Summary and Resources – Configure Azure Monitor

Knowledge Check Questions

Microsoft Learn Modules (docs.microsoft.com/Learn)

[Monitor, diagnose, and troubleshoot your Azure storage \(Sandbox\)](#)

[Analyze your Azure infrastructure by using Azure Monitor logs \(Sandbox\)](#)

[Monitor and report on security events in Azure AD Docs](#)

[Monitor the performance of virtual machines using Azure Monitor VM Insights \(Sandbox\)](#)

A sandbox indicates a hands-on exercise.

Configure Azure Alerts

Configure Azure Alerts Overview

Manage Azure Monitor Alerts

Create Alert Rules

Create Action Groups

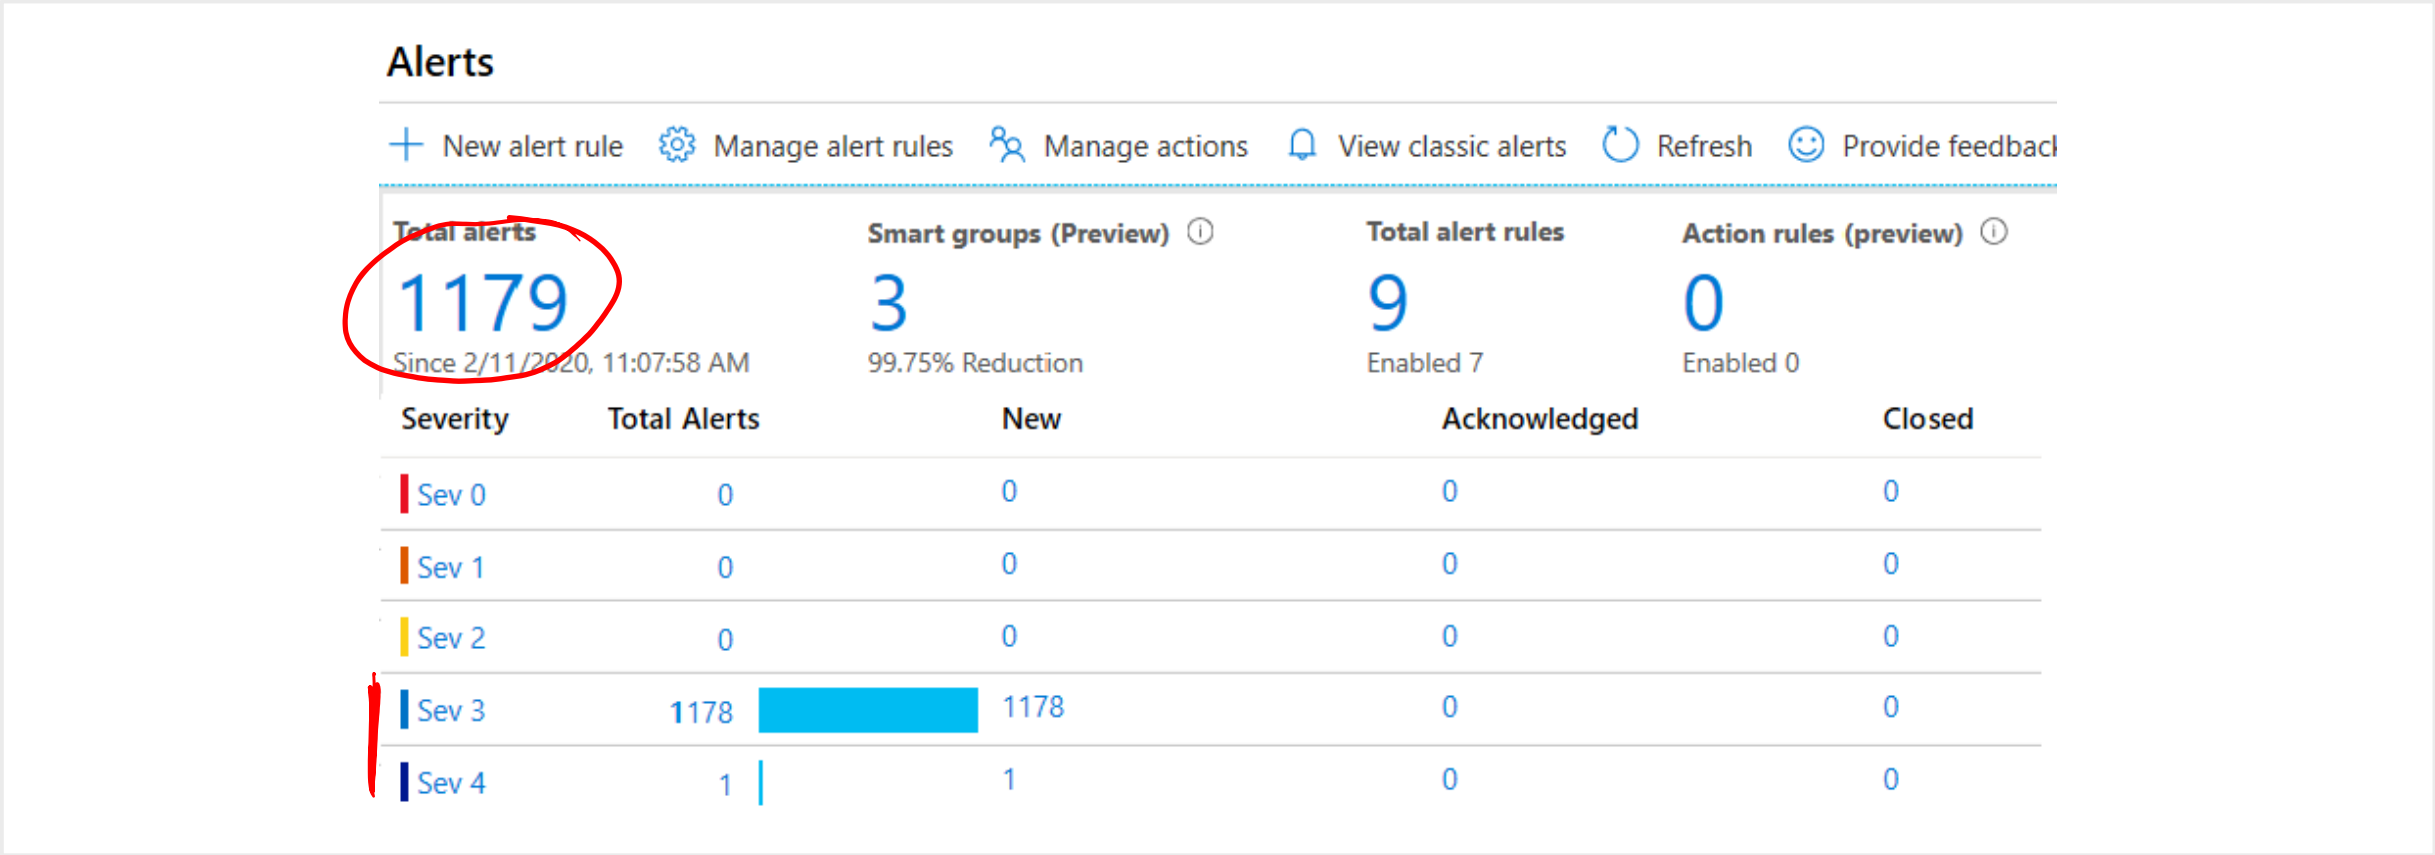

Demonstration – Alerts

Summary and Resources

Manage Azure Monitor Alerts

Unified authoring experience

Displayed by severity

Categorized by New, Acknowledged, and Closed

Create Alert Rules

Scope: Target selection, Alert criteria, and Alert logic

Alert rule details: name, description, and severity (0 to 4)

Action group: Notify your team via email and text messages or automate actions using webhooks and runbooks

[Home](#) > [Alerts](#) >

Create alert rule

Rules management

Create an alert rule to identify and address issues when important conditions are found in your monitoring data. When defining the alert rule, check that your inputs do not contain any sensitive content.

Scope

Select the target resource you wish to monitor.

Resource

No resource selected yet

[Select resource](#)

Condition

Configure when the alert rule should trigger by selecting a signal and defining its logic.

Condition name

No condition selected yet

Action group

Send notifications or invoke actions when the alert rule triggers, by selecting or creating a new action group

Action group name

No action group selected yet

Create Action Groups

Configure the method in which users will be notified when the action group triggers

Configure the method in which actions are performed when the action group triggers

Notifications

Configure the method in which users will be notified when the action group triggers. Select notification types, provide receiver details and add a unique description. This step is optional.

Notification type ⓘ	Name ⓘ	Selected ⓘ
<div><div></div><div>Email Azure Resource Manager Role</div><div>Email/SMS message/Push/Voice</div></div>	<div></div>	

Actions

Configure the method in which actions are performed when the action group triggers. Select action types, fill out associated details, and add a unique description. This step is optional.

Action type ⓘ	Name ⓘ	Selected ⓘ
<div><div></div><div>Automation Runbook</div><div>Azure Function</div><div>ITSM</div><div>Logic App</div><div>Secure Webhook</div><div>Webhook</div></div>	<div></div>	

Demonstration – Alerts

Create and configure an alert rule

Review alerts

Summary and Resources – Configure Azure Alerts

Knowledge Check Questions

Microsoft Learn Modules (docs.microsoft.com/Learn)

[Improve incident response with alerting on Azure \(Sandbox\)](#)

[Configure for alerts and detections in Microsoft Defender for Endpoint](#)

[Manage alerts and incidents in Microsoft Defender for Endpoint](#)

[Remediate security alerts using Microsoft Defender for Cloud](#)

A sandbox indicates a hands-on exercise.

Configure Log Analytics

Configure Log Analytics Introduction

Determine Log Analytics Uses

Create a Workspace

Query Log Analytics Data

Structure Log Analytics Queries

Demonstration – Log Analytics

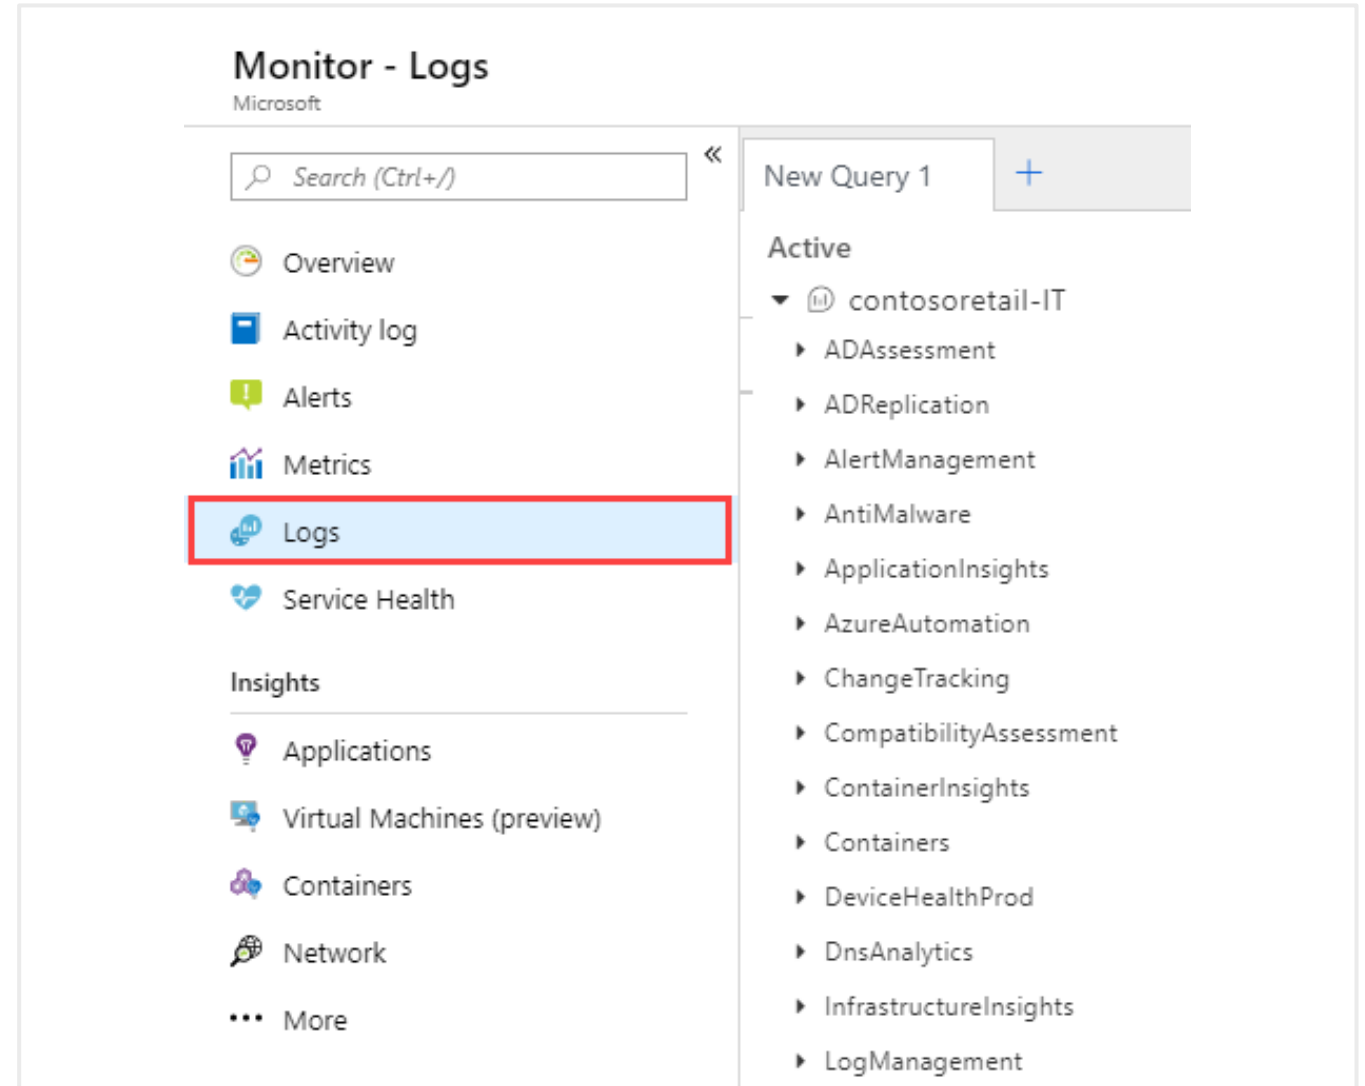

Summary and Resources

Determine Log Analytics Uses

A service that helps you collect and analyze data generated by resources in your cloud and on-premises environments

Write log queries and interactively analyze their results

Examples include assessing system updates and troubleshooting operational incidents

Create a Workspace

A workspace is an Azure resource and is a container where data is collected, aggregated, analyzed, and presented

You can have multiple workspaces per Azure subscription, and you can have access to more than one workspace

A workspace provides a geographic location, data isolation, and scope

[Home](#) > [Log Analytics workspaces](#) >

Create Log Analytics workspace ...

[Basics](#) [Tags](#) [Review + Create](#)

 A Log Analytics workspace is the basic management unit of Azure Monitor Logs. There are specific considerations you should take when creating a new Log Analytics workspace.

With Azure Monitor Logs you can easily store, retain, and query data collected from your monitored resources in Azure and other environments for valuable insights. A Log Analytics workspace is the logical storage unit where your log data is collected and stored.

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Query Log Analytics Data

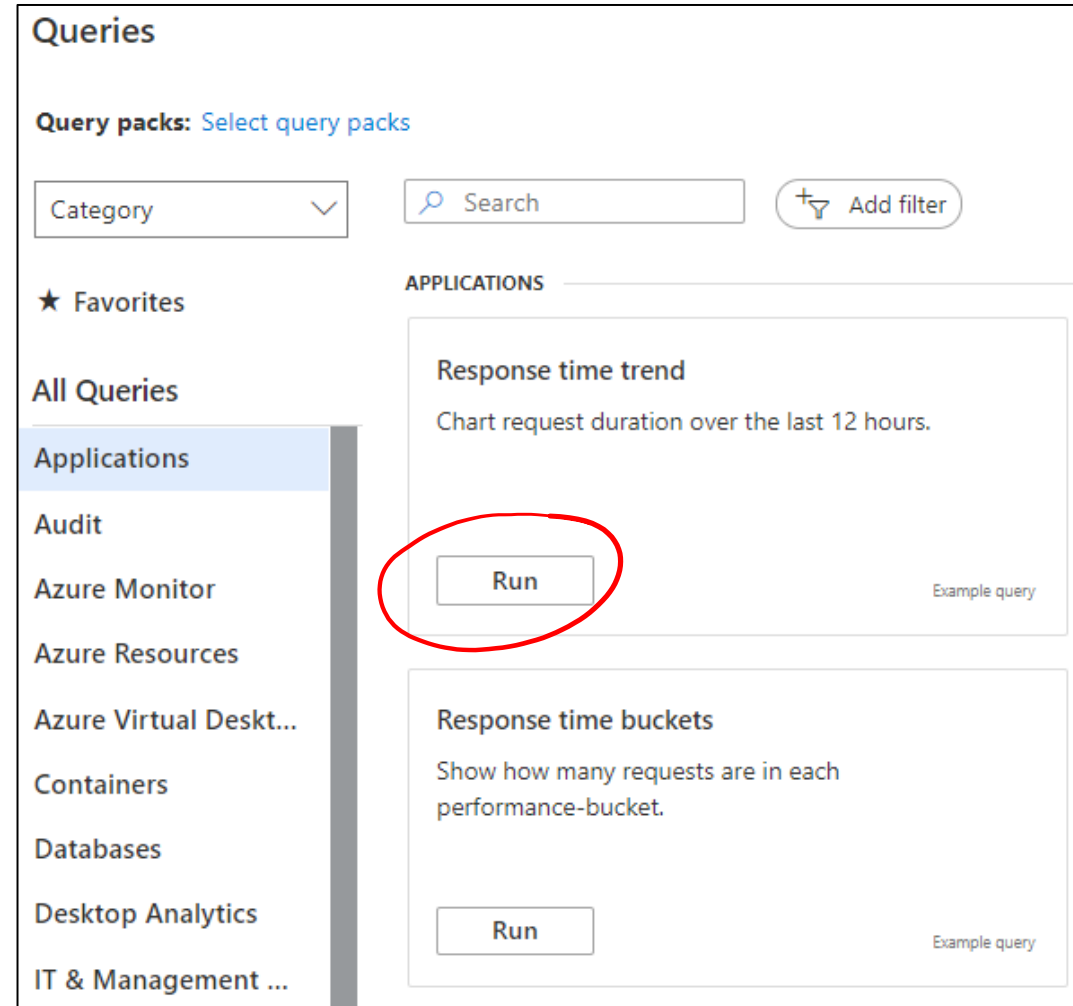

Common queries and a query language (KQL) for custom searches

Quickly retrieve and consolidate data in the repository

Save or have log searches run automatically to create an alert

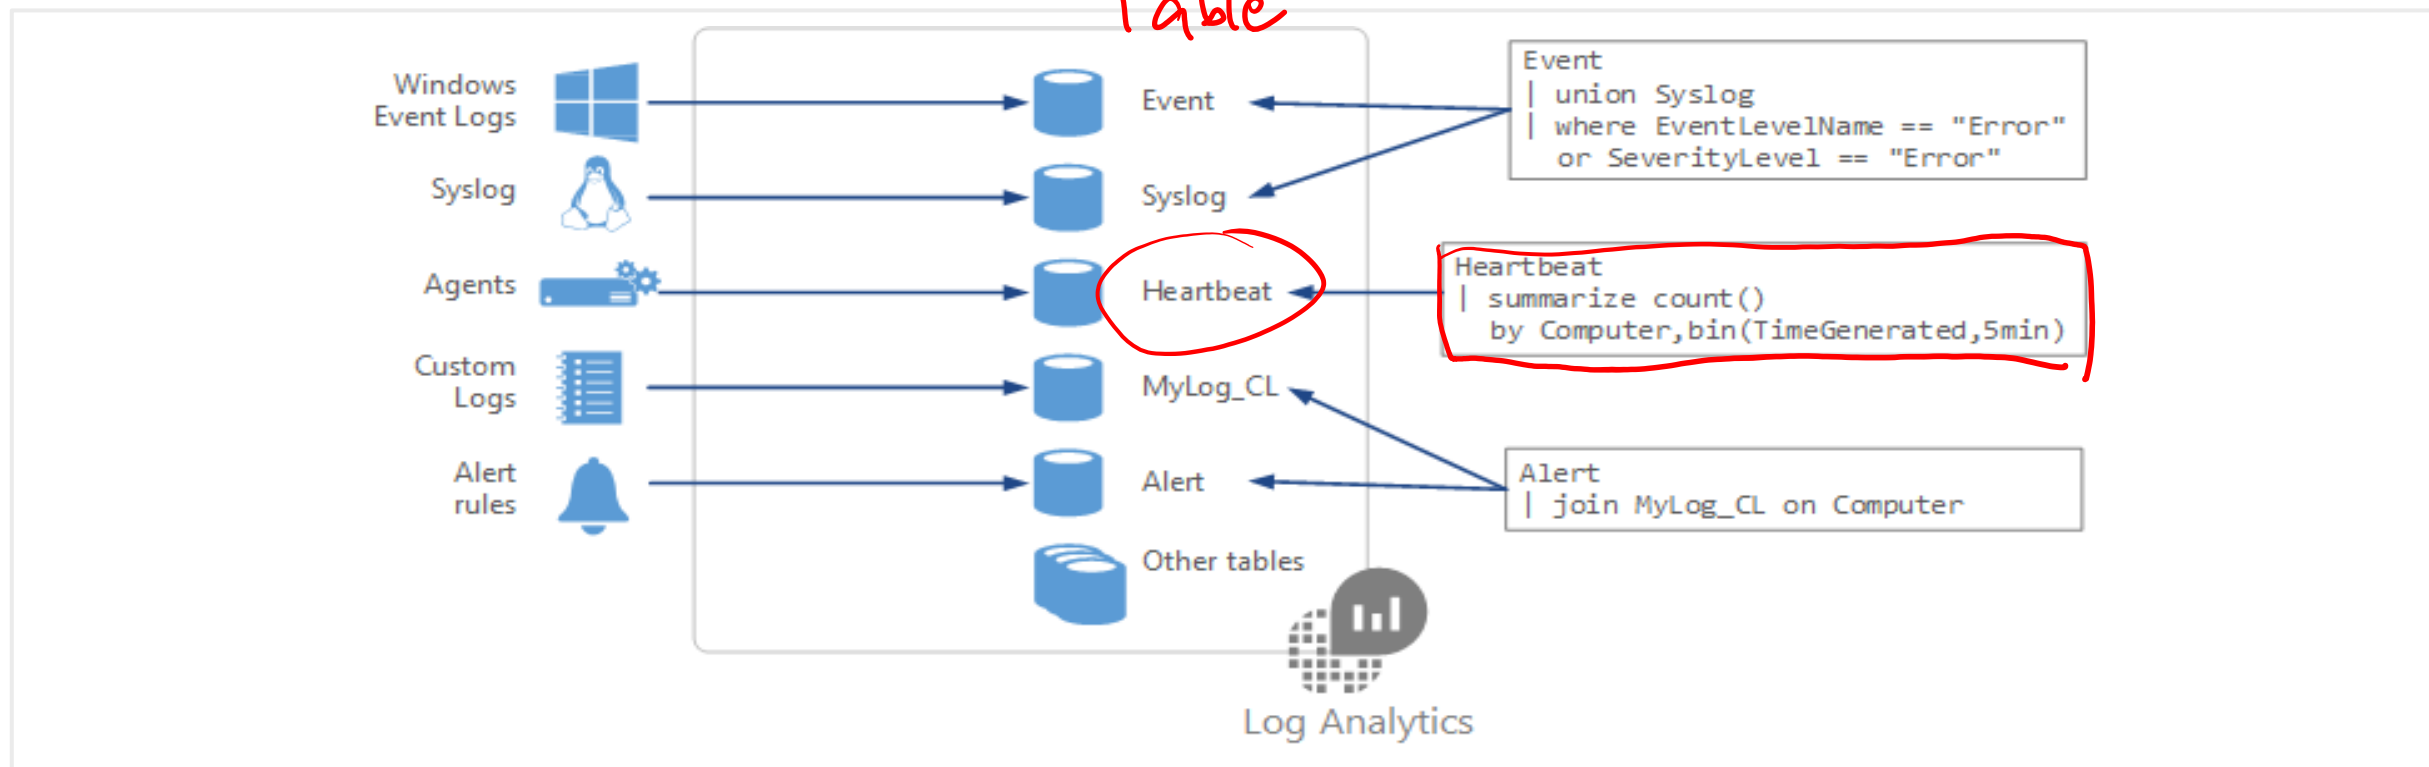

Export the data to Power BI or Excel

Monaco

KQL

Structure Log Analytics Queries

Event

```
| where (EventLevelName == "Error")
| where (TimeGenerated > ago(1days))
| summarize ErrorCount = count() by Computer
| top 10 by ErrorCount desc
```

Demonstration – Log Analytics

The diagram consists of two light gray circles arranged horizontally. A dashed blue line starts from the left, goes up and over the first circle, then down and over the second circle, and finally continues to the right. This line connects the two circles, suggesting a sequential process.

**Review built-in
log queries**

**Review the KQL
language**

Summary and Resources – Configure Log Analytics

Knowledge Check Questions

Microsoft Learn Modules (docs.microsoft.com/Learn)

[Analyze your Azure infrastructure by using Azure Monitor logs \(Sandbox\)](#)

[Monitor the performance of virtual machines using Azure Monitor VM Insights \(Sandbox\)](#)

[Write your first query with Kusto Query Language](#)

A *sandbox* indicates a hands-on exercise.

Lab 11 – Implement Monitoring

Lab 11 – Implement monitoring

Lab scenario

You need to evaluate Azure functionality that would provide insight into performance and configuration of Azure resources, focusing on Azure virtual machines. To accomplish this, you intend to examine the capabilities of Azure Monitor, including Log Analytics

Objectives

Task 1:

Provision the lab environment

Task 2:

Create and configure an Azure Log Analytics workspace and Azure Automation-based solutions

Task 3:

Review default monitoring settings of Azure virtual machines

Task 4:

Configure Azure virtual machine diagnostic settings

Task 5:

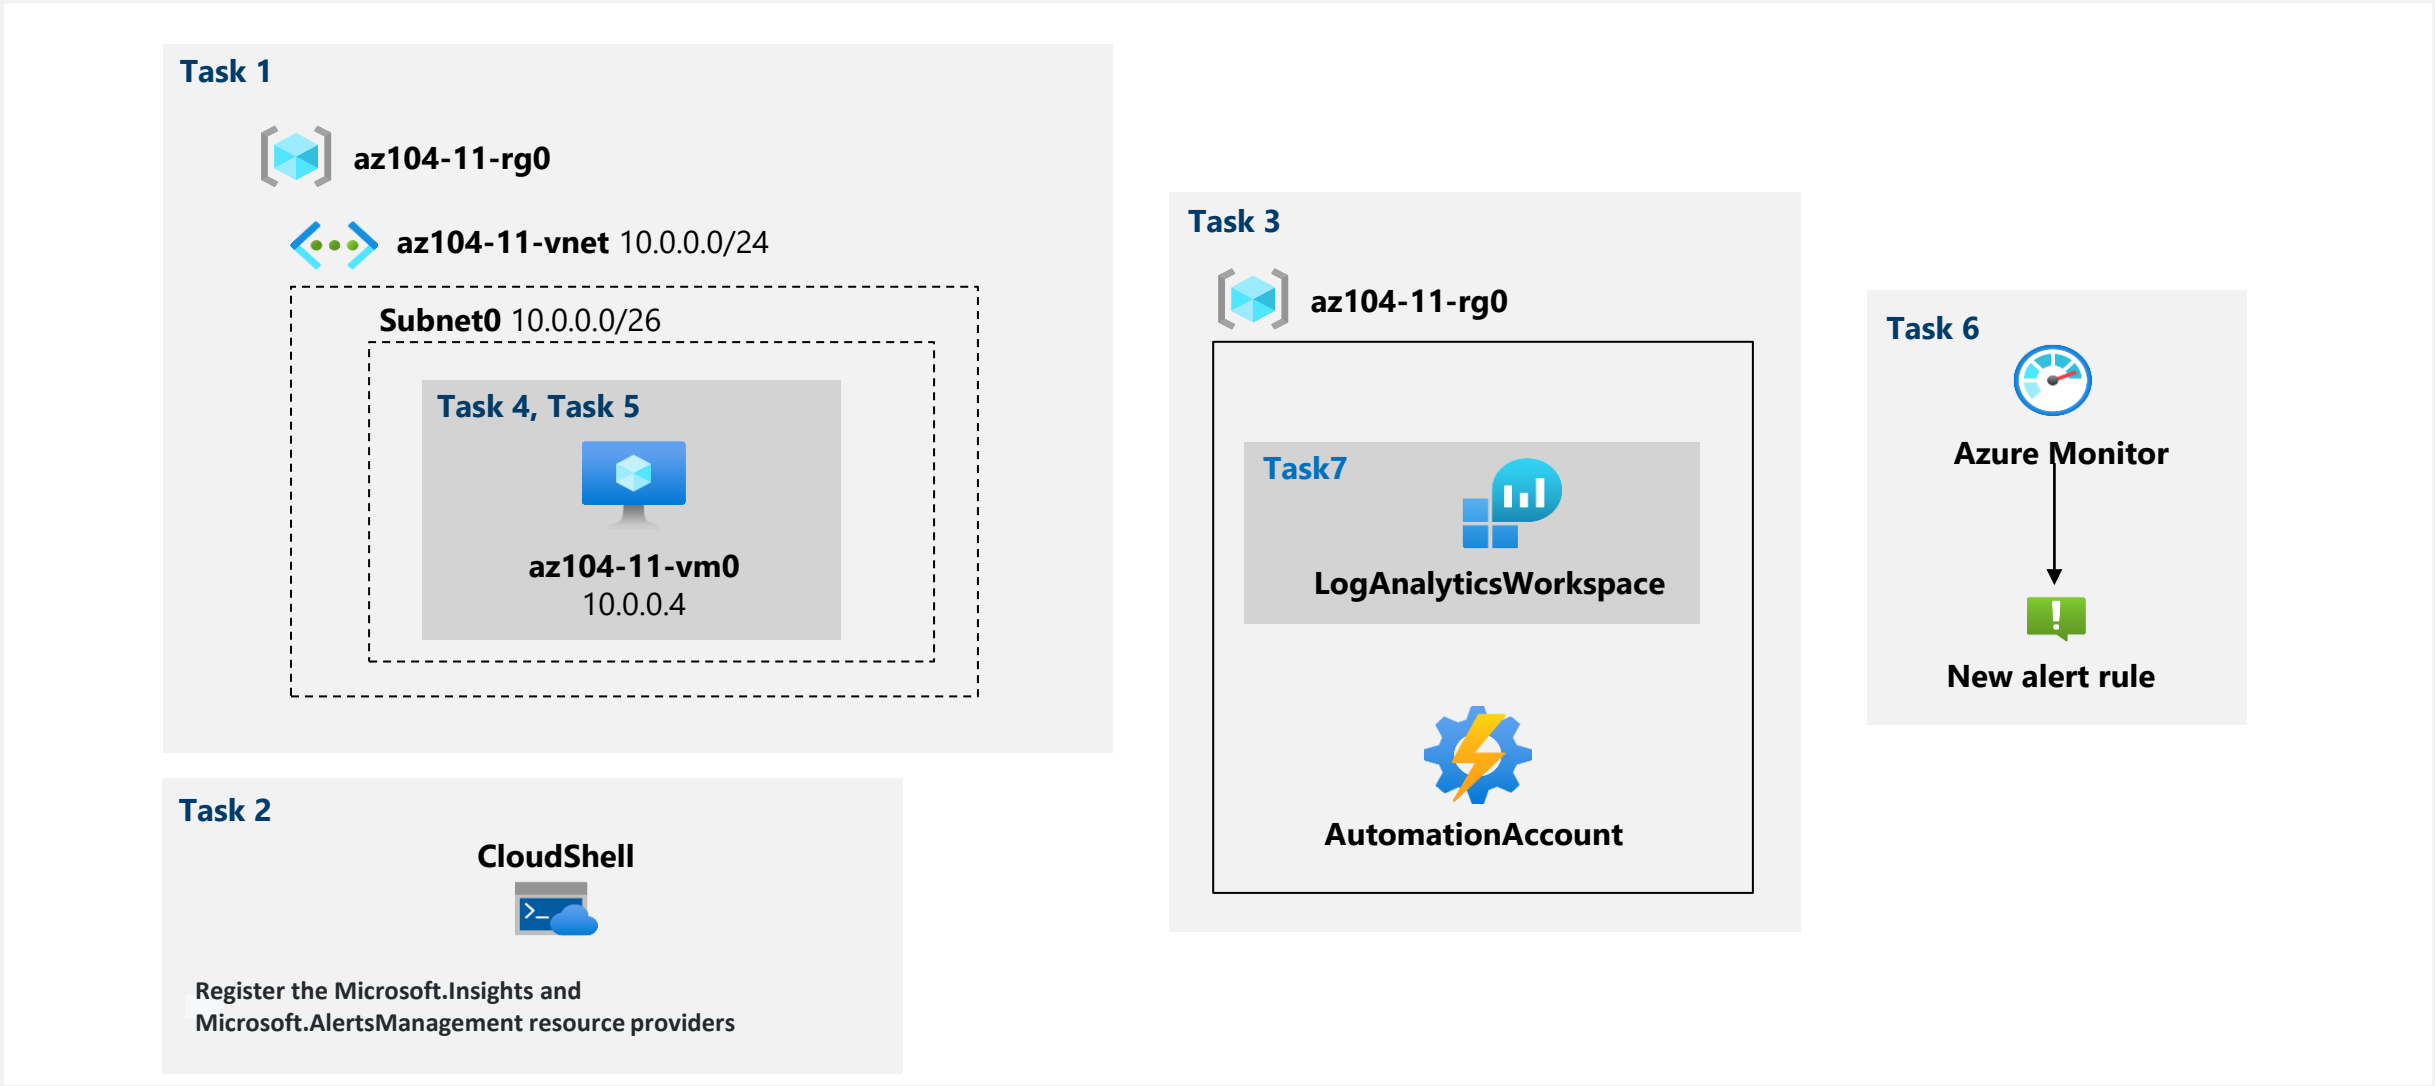

Review Azure Monitor functionality

Task 6:

Review Azure Log Analytics functionality

Next slide for an architecture diagram 

Lab 11 – Architecture diagram

End of presentation
